Question 1

Question Type: MultipleChoice

What part does a Runtime Resource use to receive communication? (select one)

Options:

- A- It receives instructional information on port 6181 by default but this is configurable using- the /port switch
- B- It receives instruction information on port 8199 by default but this is configurable by using the /inbound switch
- C- It receives instructional information using the selected WCF connection method exclusively on port 443
- D- It receives instructional formation using selected WCF connection method exclusive^ on port 8080

Answer:

B

Question 2

Question Type: MultipleChoice

What conditions must be met for a conventional Runtime Resource to be able to receive an instruction and start processing (select three)

Options:

- A-** The device where the Runtime Resource is installed must be logged m
- B-** An Interactive Client must be logged in prior to starting the Runtime Resource
- C-** The Runtime Resource must be started
- D-** The network connectivity must be configured to allow the Runtime Resource to receive connection from all relevant Interactive Clients and Application Servers
- E-** All Application Servers must be configured to process schedules
- F-** The SSICerT switch must be configured on the Application Server

Answer:

A, C, D

Question 3

Question Type: MultipleChoice

How can we ensure that at Runtime Resources in the environment are conjured to establish a secure connection which the Blue Prism server? (select one)

Options:

- A- Use the /SSLCert switch in the Runtime Resource start up parameters
- B- Under System -> Settings. Enable the 'Require secure resource connections' setting
- C- Within the configuration for the Blue Prism Server select a Connects Mode that does not contain the text Insecure'
- D- All of the above

Answer:

A

Question 4

Question Type: MultipleChoice

Where is the information reported when a Blue Prism Server service fails to start? (select one)

Options:

- A- In Control Panel under Resource Management
- B- Under System -> Server Management
- C- In the event logs on the local device. These can be accessed using Event Viewer
- D- It is not reported but the troubleshooting provides useful tips to diagnose the issue

Answer:

C

Question 5

Question Type: MultipleChoice

Which of the following are common reasons why a Blue Prism Runtime Resource is not be able to connect to an Application Server?
(select three)

Options:

- A- Active directory has not been configured correctly

- B-** If firewalls prevent the Application Server from receiving traffic on the appropriate port
- C-** If the Application Server is configured to use Transport Encryption but the certificate cannot be validated
- D-** A user is logged into Blue Prism on the Application Server
- E-** If there is a mismatch between the Connection Mode setting on the Runtime Resource and Application Server

Answer:

B, C, E

Question 6

Question Type: MultipleChoice

What format of machine name does an Interactive Client or Application Server use to establish a direct connection with a Runtime Resource? (select one) '

Options:

- A-** It always uses the short machine name (e.g. robot001)
- B-** It always uses the fully qualified domain name (FQDN) (e.g. robot001 .mydomain.local)

- C-** It depends on the system wide setting which indicates whether short name or FQDN will be used
- D-** It uses the format of the name specified on the certificate that is associated w4h the Runtime Resource

Answer:

C

Question 7

Question Type: MultipleChoice

When starting a Runtime Resource using the /sslcert switch, what reasons can prevent it from starting? (select two)

Options:

- A-** If the name- on the certificate does not match the name (or correct format) of the Runtime Resource
- B-** If the thumbprint of the certificate is not for a valid certificate on the local device
- C-** If the certificate has expired or been revoked
- D-** If the certificate has not been issued by a certification authority that is trusted by device attempting to connect

Answer:

A, B
