Question 1

Question Type: MultipleChoice

What is the benefit of Hot Spare disks?

Options:

- A- Enable efficient use of SSDs and NL SAS drive technologies
- B- Provide space-optimal data redundancy against multiple drive failures
- C- Handle any disk failure by distributing data over multiple drives
- D- Replace failed drives by taking the identity of the failed drive

Answer:

D

Question 2

Question Type: MultipleChoice

You plan to gather application performance data from an existing UNIX environment. What should you use?

Options:

A- esxtop

B- NaviAnalyzer

C- iostat

D- perfmon

Answer:

D

Question 3

Question Type: DragDrop

Match each platform requirement to its respective definition.

CHARACTERISTIC:

REQUIREMENT:

Simplifies application development

Consolidated Technology Stack

Supports multiple programming languages and frameworks

Scalability

Focuses on rapid product delivery and QA

Microservice Support

Ensures optimal end-user service and utilization

Agile development and DevOps

Question 4

Question Type: DragDrop

You are tasked with designing a new cloud infrastructure. Match each compute related requirement with its proper category.

REQUIREMENT:

CATEGORY:

Tenant and application separation must be maintained
Answer:

CAPACITY

Sufficient CPU and memory to run the planned services

AVAILABILITY

Question 5

Question Type: MultipleChoice

Support current and future capacity

SECURITY

In a cloud design, an architect has defined a separate trust zone for host management. The hosts will be

running open source hypervisors.
Quality of components to deliver operational performance for a specified time

SCALABILITY

What should be included in the design deliverables to support this separate trust zone?

Options:

- A- Federated authentication source and preferred QoS network settings
- B- Isolated management network and a federated super-user account
- C- Separate PKI and encrypted CMP portal access
- D- Separate PKI and a separate authentication source

Answer:

B

Question 6

Question Type: MultipleChoice

A cloud architect is tasked with designing a backup using the Remote with Cloud Gateway Deployment Model.

What is a design consideration?

Options:

- A- Replication settings should be driven by organizational requirements around RPO
- B- Backup servers are required to communicate with cloud storage interfaces
- C- Larger initial backup sets may take long times to complete delivery
- D- Gateways must contain backup software to offload backup server tasks

Answer:

D
