Question 4

Question Type: MultipleChoice

You work as a Network Administrator for Blue Well Inc. Your company's network has a Windows 2000 server with the FAT file system. This server stores sensitive data. You want to encrypt this data to protect it from unauthorized access. You also have to accomplish the following goals:

Data should be encrypted and secure.

Administrative effort should be minimum.

You should have the ability to recover encrypted files in case the file owner leaves the company.

Other permissions on encrypted files should be unaffected.

File-level security is required on the disk where data is stored.

Encryption or decryption of files should not be the responsibility of the file owner.

You take the following steps to accomplish these goals:

Convert the FAT file system to NTFS file system.

Use third-party data encryption software.

What will happen after taking these steps?

Each correct answer represents a complete solution. Choose all that apply.

Options:

A- File-level security will be available on the disk where data is stored.

B- Data will be encrypted and secure.

- C- Encryption or decryption of files will no longer be the responsibility of the file owner.
- D- Other permissions on encrypted files will remain unaffected.
- E- Administrative effort will be minimum.

Answer:

A, B, D
