## Question 1

---

**Question Type:** MultipleChoice

---

What are three capabilities of VMware Aria Operations for Applications (formerly known as Tanzu Observability)? (Choose three.)

### Options:

---

- A- Create Alerts
- B- Set Application Container security policy
- C- Set Service Level Objectives
- D- Create Kubernetes Clusters
- E- Create Charts and Dashboards
- F- Create Queries

### Answer:

---

A, D, E

## Question 2

---

**Question Type: MultipleChoice**

---

What is the role of Prometheus in a VMware Tanzu Kubernetes Grid cluster?

**Options:**

---

- A-** Provide the functionality of a lightweight log processor and forwarder that allows you to collect data and logs from different sources.
- B-** Collect metrics from target clusters at specified intervals, evaluate rule expressions, display the results, and trigger alerts if certain conditions arise.
- C-** Inject time-series database (TSDB) data into high-quality graphs and visualizations.
- D-** Extend the open-source Docker distribution by adding the functionalities usually required by users such as security and identity control and management.

**Answer:**

---

B

## Question 3

---

**Question Type: MultipleChoice**

---

Which L7 ingress mode leverages the integration between NSX Advanced Load Balancer and Antrea?

**Options:**

---

- A- L7 ingress in NodePort mode
- B- L7 ingress in ClusterIP mode
- C- L7 ingress in NodePortLocal mode
- D- L7 ingress in NodeIntegration mode

**Answer:**

---

C

## Question 4

---

**Question Type: MultipleChoice**

---

Which statement is true about Tanzu package CLI plugin?

**Options:**

---

- A- It cannot be used to add additional package repositories apart from tanzu-standard.
- B- It can be used to manage packages in public repositories.
- C- It is intended only for CLI-managed packages.
- D- It can be used to install auto-managed packages.

**Answer:**

---

B

## Question 5

---

**Question Type:** MultipleChoice

---

Which two groups can be created to collect and manage objects in VMware Tanzu Service Mesh? (Choose two.)

**Options:**

---

- A- Node groups
- B- Cluster groups
- C- Security groups

**D-** API groups

**E-** Service groups

**Answer:**

---

B, E

## Question 6

---

**Question Type:** MultipleChoice

---

Which method describes how Kubernetes clusters are upgraded?

**Options:**

---

**A-** Use rolling upgrade

**B-** In-place upgrade of each node

**C-** Use canary upgrade

**D-** Deploy a new cluster with upgraded Kubernetes release

**Answer:**

---

A

## Question 7

---

**Question Type:** MultipleChoice

---

What is the purpose of a service mesh?

**Options:**

---

- A-** Provides dynamic application load balancing and autoscaling across multiple clusters and multiple sites.
- B-** Provides a centralized, global routing table to simplify and optimize traffic management.
- C-** Provides service discovery across multiple clusters.
- D-** Provides an infrastructure layer that makes communication between applications possible, structured, and observable.

**Answer:**

---

D
