## Question 4

---

**Question Type:** MultipleChoice

---

A support engineer is tasked with working on an ACP 4200 4.0 system.

Which three pieces of equipment would the engineer expect to find in the rack that will differentiate the system from an earlier release of PodFx 3.X or CPOD 2.X? (Choose three.)

**Options:**

---

- A- Dell R601 Servers
- B- VSP 4824
- C- HP Nimble Storage CS1000
- D- HP Proliant DL360 G10 Servers
- E- VSP 7254

**Answer:**

---

B, C, D

## Question 5

---

**Question Type: MultipleChoice**

---

A support engineer logs into the System Manager (SMGR) application on an ACP 4.0 system with the intention of checking VPFM warning messages for the VSP switch. The engineer is unable to see the VPFM link in SMGR.

What could be causing this Problem?

**Options:**

---

- A-** The VPFM link was removed from SMGR as part of the upgrade of the system to ACP 4.0.
- B-** The engineer's SMGR account has insufficient access privileges to launch VPFM.
- C-** The VPFM link has been renamed as Orchestrator in ACP 4.0.
- D-** The engineer should connect to VPFM directly and not through SMGR.

**Answer:**

---

B

## Question 6

---

**Question Type: MultipleChoice**

---

As an engineer working with the ACP 4200, you see that the backup plan in place for the virtual machines relies heavily on VMware snapshots.

Which statement describes Avaya's position on using VMware snapshots for a backup solution?

**Options:**

---

- A-** VMware snapshots are the most robust backup solution for the ACP 4200.
- B-** VMware snapshots should never be used as a backup and recovery method.
- C-** VMware snapshots should be stored off site to ensure business continuity.
- D-** VMware snapshots should be stored on the ACP 4200 they are backing up.

**Answer:**

---

B
