Question 1

Question Type: MultipleChoice

The LTE system requires an uplink synchronization system. Uplink synchronization is mainly to eliminate interference between different users in a cell.

Options:

A- True

B- False

Answer:

A

Question 2

Question Type: MultipleChoice

Single-site verification refers to the self-inspection and verification of the equipment functions and coverage capabilities of a single-site after the eNB hardware installation and debugging are completed.

Options:

A- True

B- False

Answer:

A

Question 3

Question Type: MultipleChoice

Which of the following is not included in the site survey preparation tool?

Options:

A- Digital camera or mobile phone with strong camera function

B- GPS satellite receiver

C- compass

D- ruler

E- hoe

Answer:

E

Question 4

Question Type: MultipleChoice

Regarding the antennas used for LTE high-speed rail coverage, what are the errors in the following descriptions? (multiple choice)

Options:

A- High gain

B- Narrow lobe

C- Wide lobe

D- Low gain

Answer:

C, D

Question 5

Question Type: MultipleChoice

During the X2 handover in the LTE system, if re-establishment occurs, which cells may be re-established? (Multiple choice)

Options:

A- Source area

B- ItemTarget area

C- Third-party community

D- Other cells in the source base station

Answer:

A, B, D

Question 6

Question Type: MultipleChoice

LTE neighbors are divided into same-frequency neighboring cells, different-frequency neighboring cells, different system neighboring cells, and blacklist neighboring cells.

Options:

A- True

B- False

Answer:

A

Question 7

Question Type: MultipleChoice

The intermodulation interference of the system is usually mainly caused by second-order and third-order intermodulation, and the frequency of the second-order intermodulation product is $F=2f_1f_2$ or $2f_2f_1$.

Options:

A- True

B- False

Answer:

B

Question 8

Question Type: MultipleChoice

The LTE system can only switch based on frequency priority.

Options:

A- True

B- False

Answer:

B

Question 9

Question Type: MultipleChoice

Which of the following factors affect the theoretical peak of LTE cells? (multiple choice)

Options:

A- Communitybandwidth

B- Modulation(MCS)

C- MIMOmodel

D- UEability

Answer:

A, B, C

Question 10

Question Type: MultipleChoice

Before the cluster optimization test, the target area must be divided into clusters. Which of the following statements are correct? (Multiple choice)

Options:

A- The cluster division should span different areas of the test (planning) full coverage business

B- Make full use of the terrain (mountains and rivers)

C- Refer to the existing cluster division for network engineering maintenance

D- When dividing the cluster, the drive test in each cluster can be completed in one day, usually about 6 hours for one drive test

Answer:

B, C

Question 11

Question Type: MultipleChoice

Which of the following factors are the base station receiver sensitivity related to? (multiple choice)

Options:

A- channelbandwidth

B- Cell radius

C- Base station noise figure

D- untieThreshold

Answer:

A, C, D
