## Question 1

---

**Question Type:** MultipleChoice

---

Which approach can be used to filter or limit the content presented in NetProfiler Dashboard widgets?

### Options:

---

- A- Filter by Account Role
- B- Filter by Traffic Expression
- C- Filter by BPF
- D- Dashboard traffic cannot be filtered

### Answer:

---

B

## Question 2

---

**Question Type:** MultipleChoice

---

Which host group type is used by default for the End User component in NetProfiler Service definitions?

**Options:**

---

- A- Any combination of user defined groups from multiple group types
- B- ByLocation
- C- ByInternalHosts
- D- ByApp

**Answer:**

---

B

**Explanation:**

---

The default selection is the ByLocation group type. If you want to use the ByLocation group type for determining how end user components are tracked and reported, then ensure that the groups of that group type associate IP addresses with the locations you want to track.

If you have a large network, it may be desirable to track and report end users by region, rather than by individual location. In this case, you may prefer to create a ByRegion group type for managing services. In this new group type you might define regional groups instead of using smaller geographical locations.

The group type selection you make on the Configuration > General Settings page is applied to all service definitions. It determines how end-user service components are grouped on dashboards and reports. You should choose this group type carefully because historical data for services will be lost if you must change the group type later.

## Question 3

---

**Question Type:** MultipleChoice

---

Which types of data are carried forward when you generate a report using 'Traffic in Context' in NetProfiler?

### Options:

---

- A- Both the time frame and any other traffic criteria used for the previous report
- B- Only the traffic criteria
- C- Only the time frame
- D- No data is carried forward

### Answer:

---

A

## Question 4

---

**Question Type:** MultipleChoice

---

Which of the following is NOT true of NetProfiler Host Groups and Types?

**Options:**

---

- A- Each Group Type can contain hundreds of Groups
- B- Each host can be a member of multiple groups within a single group type
- C- No Limit to Number of Group Types
- D- Host group types allow viewing traffic of the same hosts from multiple perspectives

**Answer:**

---

C

## Question 5

---

**Question Type: MultipleChoice**

---

Which NetProfiler Account Role can perform all functions except change accounts, view Audit Trail and change security settings?

**Options:**

---

- A- Dashboard Viewer
- B- Event Viewer
- C- Monitor
- D- Operator

**Answer:**

---

D

## Question 6

---

**Question Type: MultipleChoice**

---

Which component of the SteelCentral NPM architecture uses SNMP polling to retrieve Hostnames and interface information from flow reporting devices?

**Options:**

---

- A- AppResponse
- B- Flow Gateway
- C- Packet Analyzer
- D- NetProfiler

**Answer:**

---

B

## Question 7

---

**Question Type:** MultipleChoice

---

Which NetProfiler integration supports the collection and reporting of identity information?

**Options:**

---

- A- SAML
- B- SNMP
- C- NetIM
- D- Active Directory

**Answer:**

---

D

**Explanation:**

---

The optional user identity feature relies on data obtained from the security event log of one or more Microsoft Active Directory domain controllers. This data can be sent directly to the appliance or it can be read by a Windows intermediary host that sends it to the appliance. The appliance interprets this data to track successful and failed login attempts by domain users on hosts within the domain. It associates this user identity information with host information to produce reports that identify users as well as hosts.
