Question 1

Question Type: MultipleChoice

An administrator needs to configure a license server to be accessible by Frame desktops.

Which server should the administrator configure?

Options:

A- utility Server

B- Sandbox

C- EC2 VM Instance

D- Azure VM Instance

Answer:

A

Explanation:

Frame is a cloud-based desktop-as-a-service platform that allows users to access Windows applications and desktops from any device¹. A license server is a server that hosts a network licensing manager for software that requires licenses to run². Frame supports using a utility server as a license server for Frame desktops¹. A utility server is a stand-alone, general purpose Windows server that can be configured and managed from the Frame dashboard¹.

Question 2

Question Type: MultipleChoice

An administrator is trying to add a Nutanix cluster as a new connection, but connection name Nutanix AHV is not listed in the Connection type menu.

What should the administrator do to resolve this issue?

Options:

- A-** Install the Nutanix AHV plugin for Citrix on all Storefront.
- B-** Install the Nutanix AHV plugin for Citrix controllers.

C- Install the Nutanix AHV plugin for Citrix Director on Delivery controllers.

D- Install the Nutanix AHV plugin for Citrix Director on Storefront Servers.

Answer:

B

Explanation:

This is because this option will enable the administrator to add a Nutanix cluster as a new connection by installing and registering the plugin on the Delivery Controllers that manage the connection type menu.

Question 3

Question Type: MultipleChoice

Which scenario represents the best case for how an organization would deploy non-persistent desktops to their employee and customer base?

Options:

- A- High end developers
- B- Private equity traders
- C- Application Quality Assurance Testing
- D- Registration kiosks at a conference

Answer:

D

Explanation:

This is because registration kiosks are used by multiple customers who do not need to personalize their desktops or applications, and who only need to perform a specific task such as registering or checking in. Non-persistent desktops can provide a secure and consistent user experience for these customers, and also reduce management overhead for the organization.

Question 4

Question Type: MultipleChoice

There are 50 people in a legal department who are scheduled to have their laptops replaced with virtual desktops. Their application suite consists of Microsoft Office 365, Photoshop, and an Ip-based application internally developed by the company.

Which option minimizes management overhead of the gold image, while providing the users with access to their application suite?

Options:

- A- Persistent virtual machines with the application suite built into the gold image
- B- Non-persistent MCS delivered virtual machines virtualizing the application suite
- C- Remote Desktop Services virtualizing the application suite
- D- Citrix Virtual Apps virtual hosted desktop with the application suite built into the gold Image

Answer:

B

Explanation:

ersistent virtual machines are those that retain all the user's personal settings, files, and customizations after each session¹². Non-persistent virtual machines are those that reset to a predefined state after each session and do not save any user data¹². MCS (Machine Creation Services) is a Citrix feature that allows administrators to create and manage multiple virtual machines from a single master image³. Remote Desktop Services (RDS) is a Microsoft feature that allows users to access applications or desktops hosted on a remote server⁴. Citrix Virtual Apps is a Citrix feature that allows users to access applications hosted on a remote server or cloud⁵

Question 5

Question Type: MultipleChoice

Which solution can the administrator implement to resolve the issue?

Options:

- A-** Reduce the number of snapshots to allow for the task to fetch a limited number of snapshots.
- B-** Uninstall the Nutanix AHV Plugin for Citrix.
- C-** Increase the number of snapshots to allow for the task to fetch a limited number of snapshots,
- D-** Downgrade the Nutanix AHV Plugin for Citrix to version 2.6 or below.

Answer:

A

Explanation:

This is because having too many snapshots can cause serialization or deserialization errors when using the JSON serializer5

Question 6

Question Type: MultipleChoice

An administrator needs to create a new MCS Catalog, but is receiving a failure error, as shown below:

Acropolis _ Inventory: Getccntent Exception:system.ArgumentException: Error during serialization or deserialization using the JSON Java Scriptseriali:er. The length of the string exceeds the value set on the maxJsonLenth property.

Options:

A- Running the below command on CVM shows the following output:

B- nutanix@cvm: ~\$ acli snapshot.list | wc -- |

C- 1919

D- nutanix@cvm: ~\$ acli snapshot.list | wc -1

E- 4787

Answer:

B, D, E

Question 7

Question Type: MultipleChoice

Which solution will allow the administrator to customize this user experience?

Options:

A- Mandatory or Local Profile

B- Virtual Disk Based Profile

C- user Environment Management

D- user Profile Management Solution

Answer:

D

Explanation:

Users may expect some level of personalization and consistency across their virtual desktop sessions, even if they do not save any changes¹. To customize this user experience, administrators can use different solutions that manage user profiles and settings¹.
