C) 1. Clear the current configuration of the switch2. Restart the device.3. Copy a previously saved configuration file to the running-configuration4. Copy the running-configuration to the startup configuration.			
D) 1.Restarting device.2. Copy the running-configuration file to a remote server.3. Clear the current configuration of the switch.4. Copy the running configuration to the startup configuration			
Answer:			
C			
Explanation:			

Problems, such as memory corruption, can occur that make it necessary for you to recover your configuration from a backed-up version.

Each time that you enter a copy running-config startup-config command, a binary file is created and the ASCII file is updated. A valid binary configuration file reduces the overall boot time significantly. A binary file cannot be uploaded, but its contents can be used to overwrite the existing startup configuration. The write erase command clears the binary file.

SUMMARY STEPS

- 1. write erase
- 2. reload
- 3. copy configuration-file running-configuration
- 4. copy running-config startup-config
