Question 1

What is the maximum amount of Appliances within Security group in Dual-Site configuration?
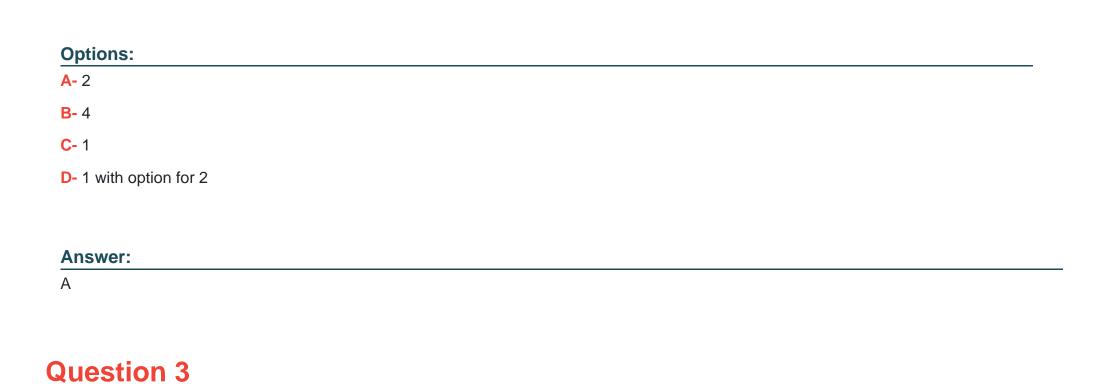

Options:

A- 16

B- 15

C- 28

D- 31

Answer:

C

Question 2

How many power supplies are presented on MHO-140?

Options:

A- 2

B- 4

C- 1

D- 1 with option for 2

Answer:

A

Question 3

Orchestrator should be defined in SmartConsole as:

Options:

A- Orchestrator is not defined in SmartConsole

B- Check Point host

C- Security Gateway

D- Host

Answer:

A

Question 4

Question Type: MultipleChoice

Which command will be used in order to restart Orchestrator service only?

Options:

A- orchd restart

B- cpstop; cpstart

C- reboot

D- service orchestrator restart

Answer:

A

Explanation:

Page 313 from the training manual:

- Restart the service:

orchd restart

- Restart the service without confirmation

service orchd restart

Question 5

Question Type: **MultipleChoice**

What is the basic installation sequence of the Orchestrator in case of single Orchestrator?

1. Create a Security Group

2. Configure Default Gateway

3. Connect with Serial Console cable to the Orchestrator

4. Configure IP for one of its Management interfaces

5. Connect an appliance to a downlink port

6. Change Orchestrator amount to 1

7. Browse to the Orchestrator's WebUI

Options:

A- 3-4-2-6-5-7-1

B- 3-1-7-2-4-6-5

C- 1-4-2-5-7-3-6

D- 7-4-2-5-3-1-6

Answer:

A

Question 6

There's a 23800 appliance with quad NIC in slot 5. What would be the name of port 3 on this NIC?

Options:

A- ethBP3-05

B- ethsBP5-03

C- ethsBP3-05

D- ethsBP-05

Answer:

B

Question 7

What kind of cluster Dual-Site can be compared to?

Options:

A- Active-Standby or VSLS

B- VSLS only

C- Active-Active

D- Active-Standby only

Answer:

A

Explanation:

A Dual-Site cluster is a type of cluster that combines the features of both Active-Standby and VSLS (Virtual Systems Load Sharing) clusters. Dual-Site clusters allow you to have two active clusters, one at each site, and the traffic is distributed between the two sites based on predefined rules and priorities.

A Dual-Site cluster can be compared to an Active-Standby cluster because one of the clusters is running in a passive mode and is only activated in case of a failure or a planned maintenance of the active cluster. And also can be compared to a VSLS cluster because both clusters are active and share the traffic load.

It's a type of High Availability solution that provides redundancy and failover capabilities across two geographically separated sites. In case of a failure or a outage on one site, the traffic is automatically redirected to the other site, ensuring that the service is not interrupted.

Question 8

Question Type: MultipleChoice

What is the purpose of Management ports located on the Rear Panel of the Orchestrator MHO-140?

Options:

A- Reserved for internal purposes. Not in use.

B- Out-of-band interfaces for access to Orchestrator itself.

C- 1Gbps connectivity for Security Groups.

D- Additional ports used as uplinks.

Answer:

B
