Question 1

Question Type: MultipleChoice

A six-node vSAN ESA cluster contains multiple virtual machines, and a vSAN storage policy with the rule "Failures to tolerate" set to "1 failure - RAID-5 (Erasure Coding)" is assigned. A vSAN administrator has changed the rule in the assigned policy to "2 failures - RAID-6 (Erasure Coding)".

What is the result of this change?

Options:

- A- No changes occur until the policy is reapplied.
- B- The changes are queued for 60 minutes.
- C- The policy change is rejected immediately.
- D- The updated policy is serially applied to the virtual machines.

Answer:

D

Question 2

Question Type: MultipleChoice

An organization plans to implement a new vSAN 8.0 cluster to take advantage of the new features around improved I/O flow, better resiliency, and more efficient disk usage. The vSAN ReadyNodes available for the cluster consist of eight NVMe disks.

How should the organization configure the disk layout?

Options:

- A- Use vSAN OSA and create two disk groups with one cache disk and three capacity disks each
- B- Use vSAN ESA and the new Storage pool configuration where all disks contribute to capacity
- C- Use vSAN OSA and the new Storage pool configuration where all disks contribute to capacity
- D- Use vSAN ESA and create two disk groups with one cache disk and three capacity disks each

Answer:

B

Question 3

Question Type: MultipleChoice

An organization wants to implement a virtual desktop infrastructure (VDI) solution on their vSAN storage. They also need to store their applications running inside the VDI environment on vSAN storage.

Which two end-user computing (EUC) solutions could be implemented to satisfy the requirements of the organization? (Choose two.)

Options:

- A- Agp_ Volumes
- B- Workspace ONE Access
- C- Horizon
- D- Workspace ONE UEM
- E- Dynamic Environment Manager

Answer:

A, C

Question 4

Question Type: MultipleChoice

What are two characteristics of a durability component in vSAN? (Choose two.)

Options:

- A- Better Performance
- B- Faster resynchronization
- C- Faster snapshot creation
- D- Better Storage utilization
- E- Better Availability

Answer:

B, E

Question 5

Question Type: MultipleChoice

A vSAN administrator is responsible for managing a customer's production vSAN cluster that is going to be used to provide SMB file shares to a number of host clients. The vSAN administrator must take action so the performance of all services in the production vSAN

cluster can be monitored.

Which two services must be enabled for this monitoring to occur? (Choose two.)

Options:

- A- vSAN Performance Diagnostic Service
- B- iSCSI Target Service
- C- vSAN File Services
- D- vSAN Health Service
- E- vSAN Performance Service

Answer:

C, E

Question 6

Question Type: MultipleChoice

A vSAN administrator needs to update vSAN from version 7.0.2 to version 8.0.

Which is the correct order to perform the update?

Options:

- A- vSphere -> vCenter -> vSAN on-disk format
- B- vSphere -> vSAN on-disk format -> vCenter
- C- vCenter -> vSphere -> vSAN on-disk format
- D- vSAN on-disk format -> vSphere -> vCenter

Answer:

C

Question 7

Question Type: MultipleChoice

What are two characteristics of the vSAN Data-At-Rest Encryption (DARE)? (Choose two.)

Options:

- A- it requires Self-Encrypting Drives in order to work.
- B- it needs to be enabled together with the vSAN Data-In-Transit encryption.
- C- it is Software Defined and works independently of the Cache or Capacity drives installed on the Nodes.
- D- it is not supported on Stretched Cluster environments.
- E- it continues to operate unaffected during downtime on vCenter Server.

Answer:

C, E

Question 8

Question Type: MultipleChoice

Which two actions are recommended when adding a host to a vSAN cluster? (Choose two.)

Options:

- A- Create uniformly-configured hosts
- B- Disable vSAN performance service

- C- Disable vSphere Cluster Services
- D- Disable vSphere High Availability (HA)
- E- Reference the VMware Compatibility Guide

Answer:

A, B

Question 9

Question Type: MultipleChoice

An application refactor requires significant storage that is being added for logs stored on a VM vDISK. The application VMs run on a dedicated vSAN enabled vSphere Cluster with custom CPUs and RAM, and therefore, cannot vMotion to another vSAN enabled cluster.

The administrator needs a vSAN feature that can be used to allocate additional storage from another vSAN enabled vSphere cluster to this vSAN enabled Cluster.

Which vSAN feature should be used for this purpose?

Options:

- A- vSAN File Services
- B- vSAN HCI Mesh
- C- vSAN Replication
- D- vSAN Stretched Clusters

Answer:

B

Question 10

Question Type: MultipleChoice

Due to a planned power outage, an administrator decides to shut down the vSAN cluster using the Shutdown Cluster Wizard. The administrator starts by checking the vSAN health service to confirm the cluster is healthy and then powers off all virtual machines (VMs) including vCLS VMs.

Which step needs to be taken before starting the Shutdown Cluster Wizard?

Options:

- A- Place all ESXi hosts into maintenance mode
- B- Disable cluster member updates from vCenter Server
- C- Turn off High Availability
- D- Shutdown vCenter

Answer:

A

Question 11

Question Type: MultipleChoice

A vSAN administrator of a non-internet connected vSAN environment wants to upgrade the environment from the vSAN 7.0 U3 to the vSAN 8.0 using vLCM.

Which option, if any, should be used as a depot in this case?

Options:

- A- Configure the vSphere Lifecycle Manager to download the updates from an Online Depot.

- B-** Configure the vSphere Lifecycle Manager to download the updates from the VMware Depot using HTTPS.
- C-** Configure the vSphere Lifecycle Manager to download updates from a local UMDs-shared repository.
- D-** It is not possible to use the vSphere Lifecycle Manager on a non-internet connected environment.

Answer:

D
