## Question 1

---

**Question Type:** MultipleChoice

---

Which of the following which are common reasons why a Blue Prism Interactive Client is not be able to canned so an Application Server? (select three)

### Options:

---

- A- f the Applicant Server service is not started
- B- If Firewall prevent the Application Server from receiving traffic on the appropriate port
- C- If the Application Server is configured to use Transport Encryption but the certificate cannot be validated
- D- Invalid user credentials
- E- A user is logged into Blue Prism on the Application Server

### Answer:

---

B, C, D

## Question 2

---

**Question Type: MultipleChoice**

---

Which of the following reasons would prevent the Blue Prism Server service from being started? (select four)

**Options:**

---

- A-** It can't find a BPService exe profile with the name that it expects
- B-** If the BPService exe profile is not configured with the expected encryption schemes
- C-** If the user that the server service is attempting to use cannot access the Blue Prism database
- D-** If there are no Blue Prism devices configured to connect to the server service.
- E-** There is a problem with the Blue Prism license Key in the environment
- F-** If the server service has nothing to process (eg if there are no schedules configured)

**Answer:**

---

A, B, C, D

## Question 3

---

**Question Type: MultipleChoice**

---

When a Runtime Resource has been started using the /sslcert switch, why might 4 not be able to receive connections? (select three)

**Options:**

---

- A-** If the name on the certificate does not match the name being used to connect to the Runtime Resource
- B-** If the thumbprint of the certificate is not for a valid certificate on the local device
- C-** If the certificate has expired 01 been revoked
- D-** If the certificate has not been issued by a certification authority that is trusted by the device attempting to connect
- E-** If the context user of the Runtime Resource does not have read-only access to the certificate's private key

**Answer:**

---

A, B, D

## Question 4

---

**Question Type: MultipleChoice**

---

What BPServer exe profile name is the default Blue Prism Server service configured to use? (select one)

**Options:**

---

- A- It will use the profile within is configured with the "Is Default\* ftag
- B- It will use the first profile when ordered alphabetic ally
- C- It will use the last profile when ordered alphabetically
- D- It will use She profile named 'Default

**Answer:**

---

D

## Question 5

---

**Question Type: MultipleChoice**

---

What steps can be useful to identity why a Blue Pnsm Server service is la\*ng to start' (select three)

**Options:**

---

- A- Review the messages across a labs within appropriate profile via BPServer exe

- B-** Review the device Windows Application Event Logs
- C-** Review the server status panel in Control Room
- D-** Use a configured Blue Prism process to interrogate each connected server in turn
- E-** Review messages when starting the service manually using BPService.exe
- F-** Use BPDiagnostics to start out a Server Diagnostics and Repair task.

**Answer:**

---

B, E

## Question 6

---

**Question Type: MultipleChoice**

---

When configuring multiple Application Servers for a single Blue Prism environment what must be considered? (select one)

**Options:**

---

- A-** Each Application Server must connect to a different database
- B-** Each Application Server must be configured with the same encryption schemes and identical keys

- C- The master application server must be turned on first
- D- All application servers must be configured to enable schedules in order for scheduling to work correctly

**Answer:**

---

B

## Question 7

---

**Question Type: MultipleChoice**

---

Which of the following are steps that would normally be taken on the local device when configuring a Blue Prism Application Server?  
(select four)

**Options:**

---

- A- Use the Blue Prism Client to configure a connection to a supported database server
- B- Use BPServer.exe to create and configure a connection to a supported database server
- C- Use BPServer.exe to create or configure a profile for the server service that uses a configured database connection
- D- Use BPServer.exe to select an appropriate connection mode and, if required, to select a certificate to use

**E-** Use BPServer exe to configure which users can log into Blue Prism

**F-** Use BPServer exe to configure all encryption schemes for the environment that will use an Application Server Key store

**Answer:**

---

B, D, E, F

## Question 8

---

**Question Type:** MultipleChoice

---

What does the Server Services tab within BPServer exe provide? (select one)

**Options:**

---

**A-** It allows you to select which logon account will be used when the server service is started

**B-** It allows you to select whether the service account will be started automatically and configure the behavior if the service is to start

**C-** It checks that the service logon account is allowed to start a listener for the configured binding

**D-** It checks that the service logon account is allowed to start a listener for the configured binding and provides the option to manage the permissions

**E-** It validates that there is a service associated with the profile, and if not, provides the option to create a new service also checks that

the service logon account is allowed to start a listener for the configured binding and provides the option to manage the permissions

**Answer:**

---

D

## Question 9

---

**Question Type: MultipleChoice**

---

Which of the following statements are true in reference of the permissions required for the Blue Prism Application Server service log on user? (Select four)

**Options:**

---

- A-** When a Blue Prism Server is configured with a SQL Server database connection that uses SQL Native Authentication, the service log on user needs SQL dbowner privileges
- B-** When the Blue Prism connection used by the server is configured to use SQL Native Authentication, the service log on user does not need any SQL privileges
- C-** When a Blue Prism Server is configured with a SQL Server database connection that uses SQL Windows Authentication, the service log on user needs the minimum permissions on the appropriate Blue Prism SQL Server database as identified in the documentation

- D-** When using Single Sign on for the Blue Prism platform, the service log on user needs permission to query Active Directory Security Group membership
- E-** When using Single Sign on for the Blue Prism platform, the service log on user needs to be a Domain Administrator
- F-** When using Blue Prism native authentication for the Blue Prism platform, the service log on user needs to be a Domain Administrator
- G-** When configured to use a connection mode that uses Transport encryption, the service log on user needs read-access to the associated certificate's private key

**Answer:**

---

A, C, D, G
