Question 1

Question Type: MultipleChoice

It is assumed that a portal website needs to be built to provide external services, and the elastic scaling in Fusioncloud is used.

The service can dynamically adjust the number of instances according to the business load. In addition, we may also use which of the following

some cloud services? (many)

Options:

A- VPC

B- EIP

C- ECS

D- ELB

Answer:

A, B, C, D

Question 2

Question Type: MultipleChoice

The following description about deploying the gateway/load balancer in the FusionAccess desktop cloud is correct

Which items are there? (many)

Options:

- A-** A load balancer is used to distribute users' HTTP(S) requests to different WIs
- B-** The load balancer can automatically perform health checks on WI to ensure that all user requests can be allocated WI used
- C-** When deploying a VAG, according to different user access types, there are intranet user access and external/public network access. Two deployment scenarios for user access
- D-** When the gateway and load balancer deployment scheme adopts F5, VAG / VLB can also be installed

Answer:

A, B, C

Question 3

Question Type: MultipleChoice

Huawei FusionAccess cannot perform user access control based on which of the following methods? (one)

Options:

- A- The device is bound to the user
- B- Access time control
- C- TC is bound to the computer
- D- Access site control

Answer:

D

Question 4

Question Type: MultipleChoice

In FusionCloud, if a user wants to connect to an RDS instance, which type of cloud service must be created first? (one)

Options:

A- OBS

B- ECS

C- EVS

D- EIP

Answer:

B

Question 5

Question Type: MultipleChoice

FusionAccess adopts the industry-leading high-definition fidelity-desktop protocol, and can

Fully connected to a centralized virtual desktop. (Please fill in the English abbreviation)

Options:

A- HDP

B- adopts

Answer:

A

Question 6

Question Type: MultipleChoice

Database Security Service (DBSS) is an intelligent data

The library security protection service is used to ensure the security of the database on the cloud. The following description about DBSS is wrong. Which one is it? (one)

Options:

A- In terms of database auditing, it can provide database column-level management and access activity monitoring. Senior Event Supervisor

Control includes front-to-back views of sensitive database tables and columns, allowing independent monitoring and analysis of

database activity and
Right activity alert

B- In terms of sensitive data protection, sensitive data can be automatically located and classified according to rules, and desensitization can be easily created

and audit rules to ensure users do not expose sensitive information

C- DBSS can support multiple types of databases, including: SQL Server, MySQL, PostgreSQL, etc.

D- In terms of database security, based on the characteristics of database firewall and separation of rights and responsibilities, it can provide detection and reporting

Alarm capability, does not support real-time intrusion prevention and fault repair functions

Answer:

D

Question 7

Question Type: MultipleChoice

In Huawei's private cloud FusionCloud, the CMP role is FushionSphere OpenStack.

It is responsible for resource abstraction, resource allocation and scheduling, and application lifecycle management.

Options:

A- TRUE

B- FALSE

Answer:

B

Question 8

Question Type: MultipleChoice

When deploying FusionAccess, the administrator needs to configure a backup server. The following about backup services description of the device, which one is wrong? (one)

Options:

A- In the scenario where multiple sets of FusionAccess are connected to one set of AD / DNS / DHCP, only one set is required Configuration Backup on FusionAccess

B- If the user side is a newly created Windows AD / DNS / DHCP server, backup AD / DNS / DHCP , there is no need to install a monitoring agent on the corresponding server

C- When Backup Server backs up the CNA node where the server is located, use Backup Server to back up. The data backed up by the server may be lost

D- The backup server mainly backs up FusionAccess related system data, user data and certificates, etc.

Answer:

B

Question 9

Question Type: MultipleChoice

the user has built a database on the FusionCompute virtual machine, and once the virtual machine is connected with other virtual machines. The communication between the virtual machine is in a layer 2 network, because the data forwarding efficiency is very high, the virtual machine uses the DPDK technology, which of the following options has the best data forwarding efficiency? (one)

Options:

A- Stacking mode

B- Active and standby mode

C- LACP horizontal based on source and destination MAC

D- Polling-based load sharing

Answer:

C

Question 10

Question Type: MultipleChoice

Which of the following descriptions about the virtual private cloud VPC in Fusioncloud are correct? (many)

Options:

A- VPC can realize the isolation of computing resources at the network level.

B- Only one subnet can be created under each VPC.

C- Each user can apply for multiple VPCs.

D- By default, ECSs in different VPCs cannot communicate with each other.

Answer:

A, C, D

Question 11

Question Type: MultipleChoice

In FusionStorage, each resource pool has a home MDC.

In case of failure, the master MDC designates another MDC to host this resource pool, and one MDC manages at most two resource pools

Options:

A- TRUE

B- FALSE

Answer:

A
