Question 1

Question Type: MultipleChoice

When installing the ESM, what role must the database user be assigned in Microsoft SQL?

Options:

A- db_owner

B- db_securityadmin

C- db_datawriter

D- db_accessadmin

Answer:

A

Question 2

Question Type: MultipleChoice

To ensure that the Traps VDI tool can obtain verdicts for all unknown files what are the things that needs to be checked? Assuming ESM Console and ESM Server are on different servers. (Choose two.)

Options:

- A- ESM Server can access WildFire Server
- B- Endpoint can access WildFire Server
- C- ESM Console can access WildFire Server
- D- Endpoint can access ESM Server

Answer:

A, D

Question 3

Question Type: MultipleChoice

From the ESM console, which two ways can an administrator verify that their installed macOS agents are functional? (Choose two.)

Options:

- A- Click the Settings Tab > Agent > Installation Package to view the agents installed.
- B- Click the Dashboard Tab, and refer to the Computer Distribution and Version window
- C- Click the Monitor Tab > Agent > Health. Sort by OS and look for the macOS endpoints
- D- Click the Monitor Tab > Data Retrieval

Answer:

A, C

Question 4

Question Type: MultipleChoice

When planning to test a software exploit using a Metasploit module, what two options should be considered about the victim host to ensure success?

Options:

- A- USB port version of the victim host

- B- Speed and make of the victim's RAM
- C- software version of the target application
- D- platform, architecture, and patch level of the victim host

Answer:

A, C

Question 5

Question Type: MultipleChoice

The ESM policy is set to upload unknowns to WildFire. However, when an unknown is executed the Upload status in ESM Console never displays "Upload in progress", and the verdict remains local analysis or unknown. Even clicking the upload button and checking in does not resolve the Issue. A line in the log file suggests not being able to download a file from "https://ESMSERVER/BitsUploads/... to C:\ProgramData\Cyvera\Temp\..."

Which solution fixes this problem?

Options:

- A- Restart BITS service on the endpoint
- B- Restart BITS service on ESM
- C- Remove and reinstall all the agents without SSL
- D- In the ESM Console, use the FQDN in multi ESM

Answer:

B

Question 6

Question Type: MultipleChoice

An administrator is installing ESM Core 4.0. The SQL Server is running on a non-standard port (36418). The database connection validation is failing. The administrator has entered the following information:

Server Name: Servername\Instance

Database: TrapsDB

User Name: Domain\Account

What is causing the failure?

Options:

- A- The database name 'TrapsDB' is unsupported
- B- The instance name should not be specified
- C- The non-standard port needs to be specified in the format TrapsDB,36418
- D- The destination port cannot be configured during installation

Answer:

B

Question 7

Question Type: MultipleChoice

An administrator receives a number of email alerts indicating WildFire has prevented a malicious activity. All the prevention events refer to launching an Install Wizard that has received a benign verdict from WildFire. All prevention events are reported on a subset of endpoints, that have recently been migrated from another Traps deployment.

Which two troubleshooting actions are relevant to this investigation? (Choose two.)

Options:

- A- Check that the servers xml file has been cleared on the migrated endpoints.
- B- Check that the ClientInfoHash tag has been cleared on the migrated endpoints.
- C- Check that the actions xml file has not been cleared on the migrated endpoints.
- D- Check that the WildFire cache has been cleared on the migrated endpoints.

Answer:

A, D
