## Question 1

---

**Question Type:** MultipleChoice

---

Where can the key used by the Credential Manager be stored? (select 1)

### Options:

---

- A- The key is always stored in the database
- B- The key is always stored within the config file on the Application Server
- C- The key can either be stored in the database, in the config file on the Application Server, or in a separate securable file on the Application Server
- D- The key is hard-coded and stored securely within the Application. It is subjected to obfuscation to ensure it's protection
- E- The key can only be stored in the database or in the config file on the Application Server

### Answer:

---

C

## Question 2

---

**Question Type: MultipleChoice**

---

What should be considered when designing the Network design and placement of Blue Prism components (and the proximity to target applications)? (select 4)

**Options:**

---

- A-** If runtime resources will be deployed centrally, the outbound network connectivity and latency to the instrumented applications must be considered.
- B-** If the runtime resource and application server will be deployed outside of a common Active Directory network infrastructure. Transport Encryption connection mode must be used to secure the operating communications
- C-** A runtime resource can be deployed remotely, and connections secured, even if the runtime is not within the same Active Directory Network Infrastructure
- D-** The communication between components requires the ability to resolve the IP address of the target machine by name
- E-** If the runtime resource will be deployed remotely to the application server, certificate-based encryption may need to be considered, as instructional communications are not encrypted by default.

**Answer:**

---

A, B, D, E

## Question 3

---

**Question Type: MultipleChoice**

---

By default what port does a Runtime Resource listen on? (select 1)

### Options:

---

- A- 8181 - but it is configurable
- B- 8199-this is fixed and cannot be changed
- C- 443
- D- There is no default

### Answer:

---

A

## Question 4

---

**Question Type: MultipleChoice**

---

Which of the following statements is true, when considering Virtualizing the Blue Prism Database Server? (Select 1)

**Options:**

---

- A- Virtualization of the database server should only be considered after fully reviewing the specific vendor recommendations for the Hypervisor and SQL server version
- B- The Database server should never be virtualized
- C- Virtualization is only supported on Vmware Hypervisor technology
- D- Virtualization should be considered only in very small environments

**Answer:**

---

D

## Question 5

---

**Question Type: MultipleChoice**

---

Why is it important to control remote console access to the Runtime Resources? (select 1)

**Options:**

---

- A- Because runtime resources are used to control the scheduling of processes
- B- Because Runtime Resources will always have administrative level access to the Blue Prism database
- C- Because Runtime Resources will always have administrative level access to the Blue Prism control room
- D- Because Runtime Resources will be executing automations, where data may be visible or a transaction could be manually interfered with

**Answer:**

---

D

## Question 6

---

**Question Type: MultipleChoice**

---

What is the difference between a Runtime Resource and a Process? (select 1)

**Options:**

---

- A- There is no difference, the terms are synonymous

- B-** A Process represents a definition of the automation steps and logic: Runtime Resources execute the steps defined within a Process
- C-** A Process represents a definition of the automation steps and logic: and a Runtime Resource is an executable containing all of the logic within a single process.
- D-** A Runtime Resource represents a collection of Processes which is used as part of Release Management

**Answer:**

---

B
