Question 1

Question Type: MultipleChoice

After applying the _____pattern, a system is established in which a _____is used to provide virtual servers with direct access to LUNs.

Options:

A- Direct LUN Access, hypervisor

B- Redundant Storage, cloud storage device

C- Direct LUN Access, physical host bus adapter card

D- Redundant Storage, virtual switch

Answer:

C

Question 2

Question Type: MultipleChoice

Applying the Dynamic Failure Detection and Recovery pattern establishes a _____that can monitor and respond to runtime failure conditions.

Options:

A- Watchdog system

B- Capacity planner system

C- Failover system

D- Intelligent automation engine

Answer:

A

Question 3

Question Type: **MultipleChoice**

The application of the Intra-Storage Device Vertical Tiering pattern establishes a system that optimizes the availability of different disk types of the same capacity.

Options:

A- True

B- False

Answer:

B

Question 4

Question Type: MultipleChoice

Which pattern can be applied to establish a failover system for cloud storage devices that enables continuous data access for cloud consumers?

Options:

A- Direct LUN Access

B- Redundant Storage

C- Storage Workload Management

D- Intra-Storage Device Vertical Tiering

Answer:

B

Question 5

Question Type: MultipleChoice

The storage management portal is a portal that provides management features for

Options:

A- Vertically tiered cloud storage devices

B- Horizontally scaled cloud storage devices

C- Block-based storage devices

D- All types of cloud storage devices

Answer:

D

Question 6

Question Type: MultipleChoice

The _____ program that is implemented when applying the Hypervisor Clustering and Zero Downtime patterns can be used to move a virtual server to a different physical server host at runtime.

Options:

A- resilient watchdog

B- load balancer

C- live storage migration

D- live VMmigration

Answer:

D

Question 7

Question Type: MultipleChoice

The Intra-Storage Device Vertical Tiering pattern is applied to resolve issues caused by:

Options:

A- Multiple cloud storage devices that need to vertically scale at the same time

B- Cloud consumers that are limited to using one cloud storage device to store multiple applications and services

C- Different disk types across redundant cloud storage devices that use different storage methods

D- Cloud consumers that have cloud storage devices in different geographical regions that need to be combined

Answer:

B
