Question 1

How many instances of Oracle Visual Builder Studio are provisioned with your Oracle Fusion Cloud Applications Tenancy?

Options:

A- Multiple - for each DEV instance in your tenancy

B- None - you need to provision one manually

C- One - mapped to your production Fusion Apps instance

D- One - mapped to a TEST instance of Fusion Apps in your tenancy

Answer:

C

Explanation:

When you subscribe to Oracle Fusion Cloud Applications, you get one instance of Oracle Visual Builder Studio provisioned with your Oracle Fusion Cloud Applications Tenancy. This instance is mapped to your production Fusion Apps instance and allows you to create and deploy extensions for your Fusion Apps pages. You can also use this instance to access other instances of Fusion Apps in your

tenancy by creating sandboxes for them .

Question 2

Question Type: MultipleChoice

Which page template is NOT a transactional page template?

Options:

A- Gantt page template

B- Foldout layout page template

C- Guided process page template

D- Advanced create and edit page template

Answer:

B

Explanation:

A transactional page template is a type of page template that supports creating, updating, or deleting data in Fusion Cloud Apps. It usually consists of a form or a table with input fields, buttons, and validations. Some examples of transactional page templates are Gantt page template, Guided process page template, and Advanced create and edit page template. A foldout layout page template is not a transactional page template because it does not support data manipulation. It is a type of page template that displays information in a collapsible panel on the side of the page.

Question 3

Question Type: MultipleChoice

What are the two merits of modifying an Oracle Fusion Apps page in Visual Builder Studio? (Choose two.)

Options:

A- You can remove any UI component from the page.

B- You can edit any UI component anywhere on the page.

C- You can only edit areas that were set for configurations by Oracle.

D- You can conditionally hide/show fields in dynamic tables and forms.

Answer:

C, D

Explanation:

Modifying an Oracle Fusion Apps page in Visual Builder Studio has some advantages over modifying it directly in Fusion Apps. One of them is that you can only edit areas that were set for configurations by Oracle, which ensures that you do not break any functionality or violate any design principles of the original page. Another one is that you can conditionally hide/show fields in dynamic tables and forms, which allows you to customize the UI based on user roles or preferences .

Question 4

Question Type: MultipleChoice

What is the function of the Publish button in the Visual Builder Studio workspace editor?

Options:

A- To deploy a test version of your AgpUI extension

B- To push changes to Git, and also start a merge request

C- To deploy the sandbox that your AgpUI extension is associated with

D- To start the CI/CD package and deploy pipeline for the current extension

Answer:

B

Explanation:

The Publish button in the Visual Builder Studio workspace editor allows you to push your changes to the Git repository and also start a merge request. A merge request is a way of proposing changes from one branch to another branch in Git. It helps you to review and collaborate on your code before merging it into the main branch .

Question 5

Question Type: MultipleChoice

Which three are exposed in Visual Builder Studio? (Choose three.)

Options:

A- Fusion Cloud Apps database tables

B- Fusion Cloud Apps action chains developed by Oracle

C- Redwood templates and patterns

D- Fusion Cloud Apps REST endpoints

E- Redwood UI components

Answer:

C, D, E

Explanation:

Visual Builder Studio is a cloud-based development platform that allows you to create and extend applications using Redwood UI components, templates, and patterns. It also exposes Fusion Cloud Apps REST endpoints that enable you to access and manipulate data from Fusion Cloud Apps services. Additionally, it provides a code editor, a visual editor, a Git repository, and a CI/CD pipeline for your development projects .

Question 6

You are asked to refer to the Redwood Pattern Book before developing the Redwood application.

Which three pieces of information are included in the Pattern Book? (Choose three.)

Options:

A- Template introduction

B- Pictorial representation of data

C- User manual for Use Cases

D- Specific page functionality

E- Composites and components

Answer:

A, B, E

Explanation:

The Pattern Book is a collection of templates and patterns that provide guidance and best practices for developing Redwood applications. It includes a template introduction that explains the purpose and usage of each template, a pictorial representation of data that shows how to visualize data in different scenarios, and composites and components that describe the common elements and

interactions of Redwood UIs .

Question 7

Jane created an AppUI extension in a workspace. She wants Troy to test it before she pushes it to Git.

How can she achieve this?

Options:

A- By creating a shared workspace with Troy.

B- By clicking the Publish button in her workspace.

C- By choosing the Share option from the menu.

D- By pushing the changes to a shared branch before pushing it to Git.

Answer:

C

Explanation:

This question tests your knowledge of how to share your AppUI extension in Visual Builder Studio with another developer for testing purposes. The correct answer is C, because you can choose the Share option from the menu in your workspace editor to generate a URL that you can send to another developer who can access your extension in read-only mode. The other options are incorrect, because they are not the best ways to share your extension for testing purposes. Here is why:

Option A is incorrect, because creating a shared workspace with another developer would allow them to edit your extension as well as view it, which might not be what you want.

Option B is incorrect, because clicking the Publish button in your workspace would push your changes to Git and also start a merge request, which might not be what you want if you are not ready to merge your changes yet.

Option D is incorrect, because pushing your changes to a shared branch before pushing it to Git would require you to create another branch and also ask the other developer to switch to that branch in their workspace, which might be more complicated than simply sharing your URL.

Question 8

Question Type: MultipleChoice

By design, dialog messages interrupt the user and force them to make a decision.

Which three dialog message components are available in Redwood? (Choose three.)

Options:

A- oj-sp-message-dialog-destructive

B- oj-sp-messages-banner

C- oj-sp-message-dialog-general

D- oj-sp-smart-search-page

E- oj-sp-message-unsaved-changes

F- oj-sp-message-banner-unsaved-changes

Answer:

A, C, E

Explanation:

This question tests your knowledge of the dialog message components that are available in Redwood, which are used to interrupt the user and force them to make a decision. The correct answer is A, C, and E, because these are the three dialog message components that are available in Redwood. The other options are incorrect, because they are not dialog message components, but banner message components or page templates that can be used in different contexts. Here is a brief description of each dialog message component:

oj-sp-message-dialog-destructive: This component is used to display a dialog message that warns the user about an irreversible action that will delete or destroy data. It has a red header with an icon and a title, a body with a message and an optional description, and two buttons for canceling or confirming the action.

oj-sp-message-dialog-general: This component is used to display a dialog message that informs the user about an action that requires their confirmation or input. It has a blue header with an icon and a title, a body with a message and an optional description or input field, and one or more buttons for canceling or completing the action.

oj-sp-message-unsaved-changes: This component is used to display a dialog message that alerts the user about unsaved changes that will be lost if they navigate away from the current page. It has a yellow header with an icon and a title, a body with a message and an optional description, and two buttons for discarding or saving the changes.

Question 9

Question Type: **MultipleChoice**

Which three patterns are used in the Redwood Reference App? (Choose three.)

Options:

A- Start Page

B- Dashboard Landing Page

C- Vertical Foldout

D- Welcome Page

E- Smart Filter and Search

F- Data Grid Page

Answer:

A, B, E

Explanation:

This question tests your knowledge of the Redwood patterns that are used in the Redwood Reference App, which is a sample application that showcases the Redwood design system and the best practices for creating engaging user interfaces with Visual Builder Studio. The correct answer is A, B, and E, because these are the three patterns that are used in the Redwood Reference App. The other options are incorrect, because they are not patterns, but components or templates that can be used in different contexts. Here is a brief description of each pattern:

Start Page: This pattern is used to provide an overview of the app's functionality and allow users to start a task or a workflow. It consists of a header with a title and subtitle, a primary action button, and a grid of cards with icons and labels.

Dashboard Landing Page: This pattern is used to display key performance indicators (KPIs) and a dashboard grid with information visualizations that highlight and explain business performance. It consists of a header with a title and subtitle, a primary action button, an in-flow back button, and a dashboard grid with charts, gauges, or tables.

Smart Filter and Search: This pattern is used to enable users to filter and search data based on various criteria and see the results in a table or a list. It consists of a header with a title and subtitle, a smart filter bar with input fields and chips, an optional search bar with suggestions, and a data grid or list with pagination and sorting.

Question 10

Question Type: MultipleChoice

In which three cases would you need a Visual Builder service instance to deploy your app to? (Choose three.)

Options:

A- When the agg needs to be accessed by users who do not have Fusion Apps access

B- For gaining access to an external database through a REST service requiring basic auth

C- When there is an application that is accessible from a vanity URL (Custom domain)

D- For gaining access to Oracle Fusion Apps REST services

E- For enabling the aggto be integrated into the Fusion Cloud Apps menu

Answer:

A, C, D

Explanation:

You would need a Visual Builder service instance to deploy your app to in three cases:

When the app needs to be accessed by users who do not have Fusion Apps access: If you want your app to be available to users who are not authorized to access Fusion Cloud Apps, you need to deploy it to a stand-alone VB instance that has its own user management and security policies.

When there is an application that is accessible from a vanity URL (Custom domain): If you want your app to have a custom domain name that is different from the default VB instance URL, you need to deploy it to a stand-alone VB instance that supports custom domain configuration.

When gaining access to Oracle Fusion Apps REST services: If you want your app to access the REST services provided by Fusion Cloud Apps, such as querying or updating data, you need to deploy it to a VB instance that is connected to the FA instance and has the appropriate security roles and permissions. Therefore, options A, C, and D are the correct answers. Reference: [Deploying Visual Builder Apps], [Accessing Fusion Applications REST Services]

Question 11

What is the minimum and maximum number of steps that can be configured on a Guided process?

Options:

A- Minimum 1 and maximum 50

B- Minimum 1 and maximum 10

C- Minimum 4 and maximum 10

D- Minimum 2 and maximum 25

Answer:

B

Explanation:

A Guided process is a component that guides users through a series of steps to complete a task or a workflow. A Guided process can have a minimum of one step and a maximum of 10 steps. Each step can have a label, an icon, an optional description, and an optional action. A Guided process can also have optional buttons for navigation or completion. Therefore, option B is the correct answer.

Reference: [Guided Process Component], [oj-sp-guided-process]

Question 12

You are designing the UI to display information about a product and are asked to use the card layout, such that:

* The card layout summarizes the available information about a product in a visually compact manner.

* The card layout is used as an entry point from where users can access additional details.

Which card layout is suitable for the above requirements?

Options:

A- Object Card

B- Mini Card

C- mage Card

D- Scoreboard

Answer:

A

Explanation:

The Object Card layout is suitable for displaying information about a product and using it as an entry point from where users can access additional details. The Object Card layout consists of a header with an icon and a title, a body with one or more fields or actions, and a footer with optional actions or indicators. The Object Card layout summarizes the available information about a product in a visually compact manner and allows users to perform actions on it or navigate to more details. Therefore, option A is the correct answer.
