Question 1

Question Type: MultipleChoice

External penetration testing is a traditional approach to penetration testing and is more focused on the servers, infrastructure and the underlying software comprising the target. It involves a comprehensive analysis of publicly available information about the target, such as Web servers, Mail servers, Firewalls, and Routers.

Which of the following types of penetration testing is performed with no prior knowledge of the site?

Options:

- A- Blue box testing
- B- White box testing
- C- Grey box testing

D- Black box testing

Answer:

D

Question 2

Question Type: MultipleChoice

Meyer Electronics Systems just recently had a number of laptops stolen out of their office. On these laptops contained sensitive corporate information regarding patents and company strategies.

A month after the laptops were stolen, a competing company was found to have just developed products that almost exactly duplicated products that Meyer produces.

What could have prevented this information from being stolen from the laptops?

Options:

A- SDW Encryption

B- EFS Encryption

C- DFS Encryption

D- IPS Encryption

Answer:

B

Question 3
