Question 1

Question Type: MultipleChoice

Refer to the exhibit.

Field Name	Data Type
FEDIRS	Text
CFCC	Text
FRADDL	Double
TOADDL	Double
FRADDR	Double
TOADDR	Double
ZIPL	Text
ZIPR	Text
CENSUS1	Text
CENSUS2	Text
CFCC1	Text
CFCC2	Text
SOURCE	Text

Which change needs to be made to the table in the exhibit in order to create subtypes based on the CFCC field?

Options:

- A- A new field should be created to migrate the text values of CFCC to integers
- B- A default CFCC value should be assigned
- C- The data type of the CFCC field should be changed to Long integer
- D- The allow subtypes property should be set to True

Answer:

C

Question 2

Question Type: MultipleChoice

A geosatabase designer has the following requirements regarding the display of city feature names in output map documents:

- * The symbology needs to vary depending on city population size
- * Names may not conflict with other text or features

* Rendering performance is a higher priority than database maintenance and editing simplicity Which design option should be used to meet these requirements?

Options:

- A- standard geodatabase annotation
- B- map annotation
- C- feature linked geodatabase annotation
- D- standard layer labeling

Answer:

B

Question 3

Question Type: MultipleChoice

An ArcGIS user in a city office has a tool created from a geoprocessing model. The user is planning to share the tool with someone outside their office

How can the user ensure that others can run the tool without being able to change it?

Options:

- A- embed the model in the tool
- B- make the model read-only
- C- set a password for the model
- D- share the tool as a .dll file

Answer:

A

Question 4

Question Type: MultipleChoice

Four emergency response facilities need to be placed so that the greatest number of people in a community can be reached within five minutes.

Which analysis method is used to make this determination?

Options:

A- location allocation

B- closest facility

C- route

D- Dufer

Answer:

A

Question 5

Question Type: MultipleChoice

A representation layer has been defined using the option to save changes to the geometry of the supporting feature. If the geometry of the feature is modified using the tools from the Representation toolbar, what will be modified?

Options:

- A- the Shape field of the feature
- B- the shape In the override field
- C- the feature attributes
- D- the override attributes

Answer:

B

Question 6

Question Type: MultipleChoice

An analyst has a multi band raster, but needs just one of the bands for a project. Which geoprocessing tool should be used to extract a single band?

Options:

- A- Slice (3D Analyst)
- B- Extract by Attributes (Spatial Analyst)

C- Composite Bands (Data Management)

D- Clip (Data Management)

Answer:

C

Question 7

Question Type: MultipleChoice

An ArcGIS user has multiple tables that must be input into a single model. What can the user add to the model to automate the model to run on all tables?

Options:

A- Environment variable

B- Iterator

C- parameter variable

D- precondition

Answer:

B

Question 8

Question Type: MultipleChoice

An ArcGIS user receives parcel data from the regional government, which is supposed to line up with parcels in the data maintained by the local government. The user is tasked with reconciling the discrepancies between the local and regional data.

In which situation are the parcel boundaries within the local data more likely to be accurate than the regional data?

Options:

- A-** when local records show a parcel subdivided in 2007 but regional records do not include the update
- B-** when regional records show a new survey of a parcel in 1996. but local records do not include the survey information
- C-** when a privately owned parcel is donated to the local government in 2002 for a park but the regional government does not have a record of the new owner
- D-** when a new subdivision surveyed in 2004 within the regional area is incorporated into the local area limits in 2007

Answer:

A

Question 9

Question Type: MultipleChoice

For a project, an ArcGIS user creates a custom user interface form to allow data entry and editing directly with the database. This form must be available within ArcMap and also as a stand-alone tool.

How can this custom form be made available within ArcMap?

Options:

A- as a layer package

B- as a custom transformer

C- as an add-in

D- as an ArcPy Python script

Answer:

D

Question 10

Question Type: MultipleChoice

An ArcGIS user regularly receives a large volume of data in shapefile coverage, and table formats. The user has a Python script tool for converting the data to a standard feature class format and writing it into a file geodatabase. The user schedules the script to run automatically, based on the update schedule, but the tool is sometimes unable to write to the database.

Why is the tool sometimes unable to write to the database?

Options:

- A- Another user has a schema lock on the output feature class
- B- The scheduled task is unable to access the output feature class
- C- The service is published as a map service
- D- Another scheduled task is running simultaneously

Answer:

A
