Question 1

The firewall policy feature supports IPv4, but does not support IPv6 (radio selection).

Options:

A- TRUE

B- FALSE

Answer:

B

Question 2

Take the following about

1 lcx.exe-slave 192.168.122.111:4444 192.168.122.128:3389

2 lex -listen 3456 3789

What is the correct understanding? (Multiple selection)

Options:

A- In the second point, the server's port 3456 request is transmitted to port 3389

B- In the second point, the server's port 3789 request is transmitted to port 3456

C- In the first point, forward the data on port 4444 of the server to 192.168.122.128:3389

D- In the first point, forward the server's port 3389 data to 192.168.122.111: 4444

Answer:

B, D

Question 3

Question Type: MultipleChoice

The following describes the guiding principles for information security management Which one is incorrect? (single selection).

Options:

A- Information security requires active defense and comprehensive prevention.

Answer:

D

Question 4

Question Type: **MultipleChoice**

What are the common database intrusion detection techniques? (Multiple selection)

Options:

A- Intrusion detection technology based on known attack behaviors

B- Intrusion detection technology based on data mining

C- Statistical-based intrusion detection technology

D- Intrusion detection technology based on pattern matching

Answer:

A, B, C, D

Question 5

Question Type: **MultipleChoice**

Which of the following options does not reflect the advanced characteristics of APT attacks? (single selection).

Options:

A- Sending API attacks generally requires the power of large organizations

B- API attacks follow the course of the cyber attack chain

C- API attacks are generally more invisible Hide attacks by encrypting channels, for example

D- Zero-day vulnerabilities are used in API attacks

Answer:

B

Question 6

Common database security audit techniques according to technical characteristics What are the categories that can be divided into? (multiple selection).

Options:

A- Agent-based audit technology

B- Log-based estimation technology

C- Gateway-based audit technology

D- Audit technology based on network monitoring

Answer:

A, B, C, D

Question 7

Question Type: MultipleChoice

DNS Request Flood for DNS authoritative servers If TC source authentication is used The client device does not support using TCP to send DNS requests, how to verify the identity of the client? (single selection).

Options:

A- Use planting load inspection

B- Use DNS dynamic mode

C- Use 302 redirect

D- Use CHAME

Answer:

B

Question 8

In the Active Directory architecture, which of the following is a function of the network access server? (single selection).

Options:

A- Billing server

B- Authentication server

C- Firewall

D- Client

Answer:

C
