Answer:

A

Question 3

Question Type: MultipleChoice

Which of the following is not a type of digital certificate?

Options:

- A- Local certificate
- B- Terminal certificate
- C- Self-signed certificate
- D- Device local certificate

Answer:

D

Question 4

Question Type: MultipleChoice

The company administrator uses the ping command to test the connectivity of the network. If he needs to specify the source address of the echo-request message, what are the additional parameters he needs?

Options:

A- -i

B- -a

C- -C

D- -f

Answer:

C

Question 5

Question Type: MultipleChoice

Which of the following descriptions about the characteristics of the HWTACACS protocol is wrong?

Options:

A- Use UDP protocol

B- Separation of Authentication and Authorization

C- In addition to the standard HWTACACS header. Encrypt all the message body

D- Suitable for conducting security controls.

Answer:

A

Question 6

Question Type: MultipleChoice

Regarding NAT technology, which of the following descriptions is correct?

Options:

- A-** The internal network server of the NAT network cannot be accessed by external network users. Therefore, if a server that needs to provide external services is deployed, be sure to assign an independent public network address to the server.
- B-** NAT reduces the difficulty of network monitoring
- C-** NAT technology can only achieve one-to-one address conversion, but cannot achieve address multiplexing
- D-** NAT can hide more intranet IP addresses

Answer:

D

Question 7

Question Type: MultipleChoice

The CA certificate is the certificate of the CA itself. If there is no multi-level CA in the PKI system, the original certificate of the CA is a self-signed certificate; if there are multiple levels of CA, it will form a CA hierarchy. The top CA is the root CA, which has a CA's self-signed certificate.

Options:

A- True

B- False

Answer:

A

Question 8

Question Type: MultipleChoice

Regarding NAT technology. Which of the following descriptions is false?

Options:

- A-** In Huawei firewalls, source NAT technology refers to the translation of the source address in the IP header of the connection that initiates the connection.
- B-** In the Huawei firewall, Easy IP directly uses the public network address of the interface as the translated address, and does not need to configure a NAT address pool.
- C-** In Huawei firewalls, the NAT No-PAT technology needs to be implemented by configuring a NAT address pool.
- D-** In Huawei firewalls, the only NAT technology with port translation is NAT.

Answer:

D

Question 9

Question Type: MultipleChoice

Which of the following angles should be considered in the information security stage to consider the security of information?

Options:

A- Management

B- Security system

C- business

D- Technology

Answer:

B

Question 10

Question Type: MultipleChoice

Which of the following is an "information sabotage incident" in the classification of network security incidents?

Options:

A- Software and hardware failure

B- Information counterfeiting

C- Internet Scanning for plagiarism

D- Listen to Trojan attack

Answer:

B
