Question 1

Question Type: MultipleChoice

The following features of HUAWEI cloud storage include: (multiple choice)

Options:

- A- Deployment is relatively simple for end customers
- B- End customer investment is small
- C- The network cost of backing up to cloud storage is low
- D- Easy to expand

Answer:

A, B, D

Question 2

Question Type: MultipleChoice

In the data replication technology used for disaster recovery, the data replication technology at the host layer is compatible with servers and storage devices.

Options:

A- True

B- False

Answer:

A

Question 3

Question Type: MultipleChoice

In Huawei's local high-availability solution, if the HyperMirror feature is adopted, which feature must also be used to correct the difference?

The structure stores the entire column to create a mirror.

Options:

A- HyperMitror

B- Smartvirtalization

C- HyperClone

D- HirperReplication

Answer:

B

Question 4

Question Type: MultipleChoice

In the Huawei data protection plan, the failure types are divided into multiple selection logic errors, equipment failures, data center failures, and zone failures.

Territorial disaster. Among them, the ones with the highest "annual frequency" and "single loss" are: (multiple choice)

Options:

- A- Logic error
- B- Equipment failure
- C- Data center failure
- D- Regional disaster

Answer:

A, D

Question 5

Question Type: MultipleChoice

The cascading replication disaster recovery solution establishes a cascading replication relationship for the storage devices used by the business to achieve intra-city disaster recovery + remote disaster recovery, with little impact on the performance of the production center.

Options:

- A- True
- B- False

Answer:

A

Question 6

Question Type: MultipleChoice

What are the system debug log levels of eReplication? (multiple choice)

Options:

A- Error

B- Important

C- Warning

D- Debug

E- Run

Answer:

A, C, D, E

Question 7

Question Type: MultipleChoice

The built-in scripts of the disaster recovery management software OceanStor BCManagereReplication are for Oracle, SQL Server

The application supports one-click failure recovery. Which of the following steps is not included in one-click failure recovery?

Options:

- A- The test application starts successfully
- B- Forcibly switch the replication relationship
- C- Start the disaster recovery application
- D- Mapping LUN

Answer:

D

Question 8

Question Type: MultipleChoice

The disaster recovery system can copy business data to a local or remote data center for protection. Heng is not all data damage/

Loss can be recovered, which of the following data damage cannot be recovered by the disaster recovery system? (multiple choice)

Options:

A- Hard disk failure

B- Virus attack

C- Human misoperation

D- Business data center is paralyzed

Answer:

B, C

Question 9

Question Type: MultipleChoice

The storage capacity of site A is 2543GB. The storage capacity of site B is 3000GB. The storage capacity of site B is 3000GB.

The backup data is remotely copied to site A and saved. Consider the case of replication compression, the compression ratio is 3, and the back-end storage capacity required by site A is calculated.

What is the amount?

Options:

A- A. 3543GB.

B- B. 4644GB.

C- C. 3865GB.

D- D. 4549GB.

Answer:

A

Question 10

Question Type: MultipleChoice

Which of the following descriptions are correct about the data backup strategy? (Multiple choice)

Options:

- A-** Any backup needs a full backup as the basis
- B-** Differential incremental backup can minimize the use of backup space
- C-** Differential incremental backup refers to the backup of the differential data between two backups
- D-** Synthetic backup has advantages over incremental backup and recovery time in the same scenario

Answer:

A, B, C, D
