Question 1

Question Type: MultipleChoice

You are building an app that will process scanned expense claims and extract and label the following data:

- . Merchant information
- . Time of transaction
- . Date of transaction
- . Taxes paid
- . Total cost

You need to recommend an Azure AI Document Intelligence model for the app. The solution must minimize development effort.

What should you use?

Options:

- A-** the prebuilt Read model
- B-** the prebuilt receipt model

C- a custom neural model

D- a custom template model

Answer:

B

Question 2

Question Type: MultipleChoice

You have a local folder that contains the files shown in the following table.

Name	Format	Length (mins)	Size (MB)
File1	WMV	34	400
File2	AVI	90	1,200
File3	MOV	300	980
File4	MP4	80	1,800

You need to analyze the files by using Azure AI Video Indexer.

Which files can you upload to the Video Indexer website?

Options:

- A- File1 and File3 only
- B- File1 and File2 only
- C- File1, File2, and File4 only
- D- File1, File2, File3 and File4
- E- File1, File2, and File3 only

Answer:

D

Question 3

Question Type: Hotspot

You have an Azure subscription.

You plan to build a solution that will analyze scanned documents and export relevant fields to a database.

You need to recommend an Azure AI Document Intelligence model for the following types of documents:

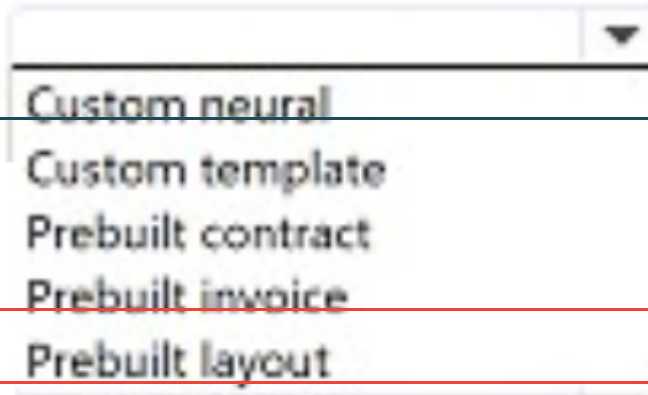

- . Expenditure request authorization forms
- . Structured and unstructured survey forms
- . Structured employment application forms

The solution must minimize development effort and costs.

Which of model should you recommend for each document type?

Expenditure request authorization forms:

Answer:

A dropdown menu with a downward arrow icon in the top right corner. The menu is open and displays five options: Custom neural, Custom template, Prebuilt contract, Prebuilt invoice, and Prebuilt layout.

Question 4

Question Type: Hotspot

In Azure OpenAI Studio, you are prototyping a chatbot by using Chat playground.

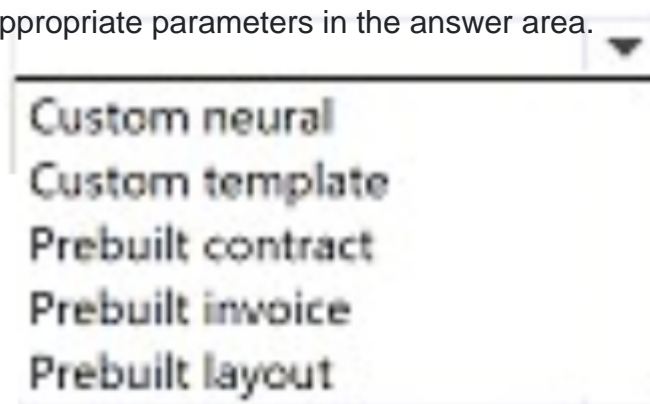

You need to configure the chatbot to meet the following requirements:

- . Reduce the repetition of words in conversations.
- . Reduce the randomness of each response.

Which two parameters should you modify? To answer, select the appropriate parameters in the answer area.

Structured employment application forms:

NOTE: Each correct answer is worth one point.

A dropdown menu with a downward arrow icon in the top right corner. The menu is open and displays five options: Custom neural, Custom template, Prebuilt contract, Prebuilt invoice, and Prebuilt layout.

Answer:

Question 5

Question Type: Hotspot

You have an Azure subscription that is linked to a Microsoft Entra tenant. The subscription ID is c7ac27a8-d186-2326-8509-c3762dad06c9 and the tenant ID is 8c4e1aab-1a2c-a2e1-ae39-e5e6e23106c9.

The subscription contains an Azure OpenAI resource named OpenAI1 that has a primary API key of 1363c794d19e430baf27a9a5f29c42ab. OpenAI1 has a deployment named embeddings1 that uses the text-embedding-ada-002 model.

You need to query OpenAI1 and retrieve embeddings for text input.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
Uri endpoint = new Uri("https://openai1.openai.azure.com");
```

```
AzureKeyCredential credentials = new AzureKeyCredential("
```

Answer:

```
OpenAIClient openAIClient = new (endpoint, credentials);
```

```
EmbeddingsOptions embeddingOptions = new EmbeddingsOptions(1
```

```
1363c794d19e430baf27a9a5f29c42ab  
c7ac27a8-d186-2326-8509-c3762dad06c9  
8c4e1aab-1a2c-a2e1-ae39-e5e6e23106c9
```

Question 6

Question Type: MultipleChoice

You are building a solution in Azure that will use Azure AI Language service to process sensitive customer data.

You need to ensure that only specific Azure processes can access the Language service. The solution must minimize administrative effort.

What should you include in the solution?

```
{  
  
    Console.WriteLine(item);  
}
```

Options:

- A- virtual network rules
- B- IPsec rules
- C- Azure Application Gateway

D- a virtual network gateway

Answer:

A

Explanation:

Virtual Network (VNet) rules allow you to restrict access to your Azure resources, such as the Azure AI Language service, to only the processes within specified VNets. This ensures that only services and processes within those VNets can communicate with the Language service, providing a secure and manageable way to control access.

Virtual network rules will allow you to securely control access to the Language service with minimal administrative overhead, ensuring that only processes within your specified VNets can access the service.

Question 7

Question Type: MultipleChoice

You are building an app that will use the Azure AI Speech service.

You need to ensure that the app can authenticate to the service by using a Microsoft Entra ID token.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

Options:

- A- Request an X.509 certificate.
- B- Create a private endpoint.
- C- Create a Conditional Access policy.
- D- Configure a custom subdomain.
- E- Enable a virtual network service endpoint.

Answer:

B, D

Question 8

Question Type: MultipleChoice

You have an Azure subscription that contains an Azure OpenAI resource named AI1 and a user named User1.

You need to ensure that User1 can perform the following actions in Azure OpenAI Studio:

- . Identify resource endpoints.
- . View models that are available for deployment.
- . Generate text and images by using the deployed models.

The solution must follow the principle of least privilege.

Which role should you assign to User1?

Options:

- A-** Cognitive Services Contributor
- B-** Cognitive Services OpenAI Contributor
- C-** Contributor
- D-** Cognitive Services OpenAI User

Answer:

D
