# Question 1

---

## Question Type: DragDrop

---

You are building a retail chatbot that will use a QnA Maker service.

You upload an internal support document to train the model. The document contains the following

You upload an internal support document to train the model. The document contains the following question: 'What is your warranty period?'

Users report that the chatbot returns the default QnA Maker answer when they ask the following question: 'How long is the warranty coverage?'

The chatbot returns the correct answer when the users ask the following question: 'What is your warranty period?'

Both questions should return the same answer.

You need to increase the accuracy of the chatbot responses.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Choose three.)

## Question 3

---

**Question Type: Hotspot**

---

You are building an app that will enable users to upload images. The solution must meet the following requirements:

- \* Automatically suggest alt text for the images.
- \* Detect inappropriate images and block them.
- \* Minimize development effort.

You need to recommend a computer vision endpoint for each requirement.

NOTE: Each correct selection is worth one point.

**Answer:**

---

## Question 4

---

**Question Type: MultipleChoice**

---

You build a language model by using Conversational Language Understanding. The language model is used to search for information on a contact list by using an intent named Findcontact. A conversational expert provides you with the following list of phrases to use for training

- \* Find contacts in London.
- \* Who do I know in Seattle?
- \* Search for contacts m Ukraine.

You need to implement the phrase list in Conversational Language Understanding.

Solution: You create a new utterance for each phrase in the FindContact intent.

Does this meet the goal?

**Options:**

---

A) Yes

B) No

**Answer:**

---

B

## Question 5

---

**Question Type: MultipleChoice**

---

You plan to build an app that will generate a list of tags for uploaded images. The app must meet the following requirements:

- \* Generate tags in a users preferred language.
- \* Support English, French, and Spanish.
- \* Minimize development effort

You need to build a function that will generate the tags for the app. Which Azure service endpoint should you use?

**Options:**

---

- A) Custom Vision image classification
- B) Content Moderator Image Moderation
- C) Custom Translator
- D) Computer Vision image Analysis

**Answer:**

---

D

## Question 6

---

**Question Type:** DragDrop

---

You plan to use containerized versions of the Anomaly Detector API on local devices for testing and in on-premises datacenters.

You need to ensure that the containerized deployments meet the following requirements:

Prevent billing and API information from being stored in the command-line histories of the devices that run the container.

Control access to the container images by using Azure role-based access control (Azure RBAC).

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Choose four.)

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.
