Question 1

Your network contains an Active Directory Domain Services (AD DS> domain. The domain contains 20 Active Directory sites. All user management is performed from a central site.

You add users to a group.

You discover that group changes do NOT appear on a domain controller in a remote site.

You need to identify whether the group changes appear on other domain controllers.

What should you use?

Options:

A- Microsoft Support and Recovery Assistant

B- File Replication Service (FRS) Status Viewer

C- Active Directory Replication Status Tool

D- Active Directory Sites and Services

Answer:

C

Question 2

You have an Azure Active Directory Domain Services (Azure AD DS) domain named aadds.contoso.com.

You have an Azure virtual network named Vnet1. Vnet1 contains two virtual machines named VM1 and VM2 that run Windows Server. VMI and VM2 are joined to aadds.contoso.com.
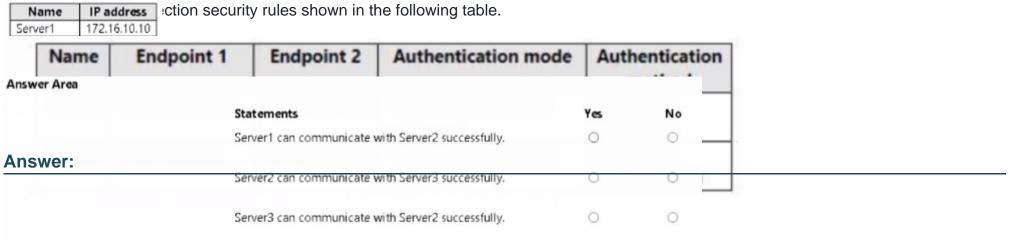

You create a new Azure virtual network named Vnet2. You add a new server named VM3 to Vnet2.

When you attempt to join VM3 to aadds.contoso.com, you get an error message that the domain cannot be found.

You need to ensure that you can join VM3 toaadds.contoso.com.

Answer Area

Network configuration: [▼]

| Add a subnet to Vnet1. |
| Add a subnet to Vnet2. |
| Add a private endpoint to Vnet2. |
| Configure virtual network peering between Vnet1 and Vnet2. |

Answer:

DNS configuration: [▼]

| Add a custom DNS server to Vnet1. |
| Add a custom DNS server to Vnet2. |
| Create an Azure private DNS zone named aadds.contoso.com. |
| Add a virtual network link to an existing Azure private DNS zone. |

Question 3

Question Type: Hotspot

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains servers that run Windows Server as shown in the following table.

Name	IP address	ction security rules shown in the following table.
Server1	172.16.10.10	

Name	Endpoint 1	Endpoint 2	Authentication mode	Authentication

Answer Area

Statements	Yes	No
Server1 can communicate with Server2 successfully.	○	○
Server2 can communicate with Server3 successfully.	○	○
Server3 can communicate with Server2 successfully.	○	○

Answer:

Question 4

Question Type: MultipleChoice

You have an Azure virtual machine named VM1 that runs Windows Server.

When you attempt to install the Azure Performance Diagnostics extension on VM I, the installation fails.

You need to identify the cause of the installation failure.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

Options:

A- Sign in to VM1 and verify the WaAppAgentlog file.

B- From the Azure portal, view the alerts for VM1.

C- From the Azure portal, view the activity log for VM1.

D- Sign into VM1 and verify the MonitoringAgentlog file.

Answer:

A, B

Question 5

You have a failover cluster named Cluster1 that contains the nodes shown in the following table.

Name	Server role
Node1	File Server

cluster role named HAFS is configured as shown in the General exhibit (Click the General tab.)

Answer Area

If you select **Move**, and then **Best Possible Node**, HAFS will move to Node3.	○	○
If you stop and start Cluster1, HAFS will come online on Node1.	○	○
If you select **Move**, **Select Node**, and then **Node2**, HAFS will move to Node2.	○	○

Answer:

Question 6

Your on-premises network has a 200-Mbps connection to Azure and contains a server named Server1 that stores 70 TB of data files.

You have an Azure Storage account named storage 1.

You plan to migrate the data files from Server1 to a blob storage container in storage!. Testing shows that copying the data files by using azcopy will take approximately 35 days.

You need to minimize how long it will take to migrate the data to Azure.

What should you use?

Options:

A- Storage Migration Service

B- Azure Storage Explorer

C- Azure Data Box

D- Azure File Sync

Answer:

A

Question 7

Question Type: MultipleChoice

You need to use a comma-separated value (CSV) file to import server inventory to Azure Migrate. Which fields are mandatory for each entry in the CSV file?

Options:

A- Server name. Cores, OS Name, and Memory (in MB)

B- Server name, IP addresses. Disk 1 size (in GB), and CPU utilization percentage

C- Server name, IP addresses, OS version, and Number of disks

Answer:

A

Question 8

Question Type: OrderList

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a failover cluster named Cluster1.

You need to configure Cluster-Aware Updating (CAU) on the cluster by using Windows Admin Center (WAC).

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Enable CredSSP.
Add Cluster1 to WAC.
Add the Cluster-Aware Updating role.
Add a group managed service account (gMSA).
Add a WAC gateway.

Answer Area

Answer:

AddBlgGredISSPMACd service account (gMSA).

Question 9

Question Type: DragDrop

You have an Azure virtual machine named VM1 that runs Windows Server. VM1 has boot diagnostics configured to use a managed storage account.

You are troubleshooting connectivity issue on VM1.

You need to run a PowerShell cmdlet on VM1 by using the Azure Serial Console.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
From the Azure portal, configure the Boot diagnostics settings for VM1 to use a custom storage account.	
From the Azure portal, open the Run command blade.	

Answer:

From the Azure portal, open the Serial console blade of VM1.	

Explanation:

From the Azure portal, enable just in time (JIT) VM access to VM1.

https://docs.microsoft.com/en-us/troubleshoot/azure/virtual-machines/serial-console-overview

From the Serial console, run `ch -si 1` and sign in by using a local account.

https://docs.microsoft.com/en-us/troubleshoot/azure/virtual-machines/serial-console-windows

From the Serial console, run `cmd`.

Question 10

You have a server named Server1 that runs Windows Server.

On Server1, you create a Data Collector Set named CollectorSet1 based on the Basic template.

You need to configure CollectorSet1 to meet the following requirements:

Older performance counter logs must be overwritten by new ones.

Performance counter logging must stop if there is less than 500MB of free disk space.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Older performance counter logs must be overwritten by new ones:

| The Configuration properties |
| The Data Manager properties |
| The Performance Counter properties |

Answer:

Performance counter logging must stop if there is less than 500 MB of free disk space:

Question 11

Question Type: MultipleChoice

| The Configuration properties |
| The Data Manager properties |
| The Performance Counter properties |

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed.

You import the Azure Migrate appliance as VM1.

You need to register VM1 with Azure Migrate.

What should you do in Azure Migrate? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

Options:

A- Create a project.

B- Add a migration tool.

C- Add an assessment tool.

D- Generate a project key.

E- Download the Azure Migrate installer script ZIP file.

Answer:

A, D

Explanation:

https://docs.microsoft.com/en-us/azure/migrate/how-to-set-up-appliance-hyper-v

Question 12

Question Type: DragDrop

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a print server named Server1. All printers are deployed to users by using a Group Policy Object (GPO) named GPO1.

You deploy a new server named Server2.

You need to decommission Server1. The solution must meet the following requirements:

Migrate the shared printers to Server2 by using the Printer Migration Wizard.

Ensure that the users use the printers on Server2.

Minimize downtime for the users.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Decommission Server1.	
Import the printers on Server2. .	

Answer:

Deploy Windows Server Hybrid Cloud Print.

Export the printers on Server1.

Explanation:

Update the service principal name (SPN) of each printer. .

Modify GPO1.
