Question 1

Question Type: MultipleChoice

Your company uses management groups to manage resources in your Azure tenant more efficiently. User1 should be able to assign access and assign policies to management groups. You need to determine to which role-based access control (RBAC) role User1 should be added.

Your solution should follow the principle of least privilege. To which role should you add User1?

Options:

- A- Owner
- B- User Access Administrator
- C- Management Group Contributor
- D- Contributor

Answer:

B

Question 2

Question Type: MultipleChoice

Your company is planning a deployment using Azure Database for PostgreSQL. The deployment should meet the following requirements:

- Up to 10 TB storage
- Azure Premium Storage
- Point-in-time-restore for up to 35 days

You need to select the appropriate deployment and pricing tier to meet these requirements and minimize costs. What should you select?

Options:

- A-** Azure Database for PostgreSQL Single Server Memory Optimized tier
- B-** Azure Database for PostgreSQL Hyperscale (Citus)
- C-** Azure Database for PostgreSQL Single Server General Purpose tier
- D-** Azure Database for PostgreSQL Single Server Basic tier

Answer:

C

Question 3

Question Type: DragDrop

Match the cloud model to the correct advantage.

Instructions: To answer, drag the appropriate cloud model from the column on the left to its advantage on the right. Each cloud model may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point

Cloud model

Work Area

Hybrid Cloud	<input type="text"/>	No required capital expenditure.
Answer: Private Cloud	<input type="text"/>	Provides complete control over security.
Public Cloud	<input type="text"/>	Provides a choice to use on-premises or cloud-based resources.

Question 4

Question Type: MultipleChoice

Which resources can be used as a source for a Network security group inbound security rule?

Options:

- A- Application security groups only
- B- IP Addressess only
- C- Service Tags only
- D- IP Addresses, Service tags and Application security groups

Answer:

A

Question 5

Question Type: MultipleChoice

Your company has a Software Assurance agreement that includes Microsoft SQL Server licenses

You plan to deploy SQL Server on Azure virtual machines.

What should you do to minimize licensing costs for the deployment?

Options:

- A- Use Azure reservations.
- B- Use Azure Hybrid Benefit
- C- Deallocate the virtual machines during off hours.
- D- Configure Azure Cost Management budgets.

Answer:

B

Question 6

Question Type: DragDrop

Match the Azure Services service to the correct descriptions.

Instructions: To answer, drag the appropriate service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point

Services	Answer Area
Azure Active Directory (Azure AD)	<input type="text"/> Analyze security log files from Azure virtual machines
Azure Key Vault	<input type="text"/> Display the secure score for an Azure subscription
Answer:	<input type="text"/> Store passwords for use by Azure Function applications
Azure Security Center	
Azure Sentinel	

Question 7

Question Type: MultipleChoice

This question requires that you evaluate the underlined text to determine if it is correct.

An Availability Zone in Azure has physically separate locations across two continents.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed." If the statement is incorrect, select the answer choice that makes the statement correct.

Options:

- A- No change is needed.
- B- within a single Azure region
- C- within multiple Azure regions

D- within a single Azure datacenter

Answer:

B

Explanation:

Availability Zones is a high-availability offering that protects your applications and data from datacenter failures. Availability Zones are unique physical locations within an Azure region.
