Question 1

Question Type: Hotspot

You are tuning a hyperparameter for an algorithm. The following table shows a data set with different hyperparameter, training error, and validation errors.

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

Answer:

Explanation:

<https://medium.com/comet-ml/organizing-machine-learning-projects-project-management-guidelines-2d2b85651bbd>

Question 2

Question Type: Hotspot

You plan to preprocess text from CSV files. You load the Azure Machine Learning Studio default stop words list.

You need to configure the Preprocess Text module to meet the following requirements:

Ensure that multiple related words from a single canonical form.

Remove pipe characters from text.

Remove words to optimize information retrieval.

Which three options should you select? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/machine-learning/studio-module-reference/preprocess-text>

Question 3

Question Type: Hotspot

You have a feature set containing the following numerical features: X, Y, and Z.

The Poisson correlation coefficient (r-value) of X, Y, and Z features is shown in the following image:

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/machine-learning/studio-module-reference/compute-linear-correlation>

Question 4

Question Type: Hotspot

You are analyzing the asymmetry in a statistical distribution.

The following image contains two density curves that show the probability distribution of two datasets.

image not found or type unknown

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

image not found or type unknown

Box 1: Positive skew

Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/machine-learning/studio-module-reference/compute-elementary-statistics>

Question 5

Question Type: Hotspot

You are developing a deep learning model by using TensorFlow. You plan to run the model training workload on an Azure Machine Learning Compute Instance.

You must use CUDA-based model training.

You need to provision the Compute Instance.

Which two virtual machines sizes can you use? To answer, select the appropriate virtual machine sizes in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

<https://www.infoworld.com/article/3299703/what-is-cuda-parallel-programming-for-gpus.html>

Question 6

Question Type: Hotspot

You have a multi-class image classification deep learning model that uses a set of labeled photographs. You create the following code to select hyperparameter values when training the model.

image not found or type unknown

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

image not found or type unknown

Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/machine-learning/how-to-tune-hyperparameters>

Question 7

Question Type: Hotspot

You have an Azure Machine Learning workspace named workspace1 that is accessible from a public endpoint. The workspace contains an Azure Blob storage datastore named store1 that represents a blob container in an Azure storage account named account1. You configure workspace1 and account1 to be accessible by using private endpoints in the same virtual network.

You must be able to access the contents of store1 by using the Azure Machine Learning SDK for Python. You must be able to preview the contents of store1 by using Azure Machine Learning studio.

You need to configure store1.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/machine-learning/how-to-access-data>

Question 8

Question Type: OrderList

You are using a Git repository to track work in an Azure Machine Learning workspace.

You need to authenticate a Git account by using SSH.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

image not found or type unknown

Answer:

Generating a public key, Generating an SSH repository URL, Adding the public key to the Git account

Explanation:

<https://docs.microsoft.com/en-us/azure/machine-learning/concept-train-model-git-integration>

Question 9

Question Type: Hotspot

You create an Azure Machine Learning workspace and set up a development environment. You plan to train a deep neural network (DNN) by using the Tensorflow framework and by using estimators to submit training scripts.

You must optimize computation speed for training runs.

You need to choose the appropriate estimator to use as well as the appropriate training compute target configuration.

Which values should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Image not found or type unknown

Answer:

Explanation:

<https://docs.microsoft.com/en-us/python/api/azureml-train-core/azureml.train.dnn>

Question 10

Question Type: OrderList

You are creating an experiment by using Azure Machine Learning Studio.

You must divide the data into four subsets for evaluation. There is a high degree of missing values in the data.

a. You must prepare the data for analysis.

You need to select appropriate methods for producing the experiment.

Which three modules should you run in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Image not found or type unknown

Chapter 11: Using Data Partition and Sample

Question 11

Question Type: Hotspot

You have a Python data frame named salesData in the following format:

Image not found or type unknown

The data frame must be unpivoted to a long data format as follows:

Image not found or type unknown

You need to use the pandas.melt() function in Python to perform the transformation.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Image not found or type unknown
