Question 1

Question Type: DragDrop

You need to design the workspace for the sales manager.

Which object types should you use? To answer, move the appropriate object types to the correct key performance indicators. You may use each object type once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct select is worth one point.

Object types

- Aggregate measurement t
- Aggregate dimension on
- Aggregate data entity y

Object type for Key performance indicators

Key performance indicator	Object type
Item type	
Total quotation	
Sites	

Answer:

Question 2

Question Type: MultipleChoice

You need to design the processAttachment method for the MigrateAttachment class. Which attribute should you use?

Options:

A- [Replaceable(false)]

B- [Replaceable(true)]

C- [Wrappable(true)]

D- (Hookable(false)]

Answer:

B

Question 3

Question Type: MultipleChoice

You need to design a form to display the check data.

Which two form patterns can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

Options:

- A- Details master
- B- Simple List
- C- Simple List and Details
- D- List page

Answer:

A, C

Question 4

Question Type: DragDrop

A company uses Dynamics 365 finance and operations apps. The company uses Power BI Desktop to fetch a list of customers.

You need to create a Power BI report to view the list. You authenticate a Power BI Desktop instance by using a Dynamics 365 finance and operations app.

Which four actions should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer area
<ul style="list-style-type: none"> Enter the name of the Customers data entity. <i>1</i> 	
<p>Answer:</p> <ul style="list-style-type: none"> Create a Power BI report by using the customer data. <i>1</i> 	
<ul style="list-style-type: none"> Select Get data from Power BI. 	
<ul style="list-style-type: none"> Select Data feed. 	
<p>Question Type: MultipleChoice</p> <ul style="list-style-type: none"> Enter the Microsoft Customers OData endpoint. <i>1</i> 	
<ul style="list-style-type: none"> Enter credentials to connect a database. 	

Question 5

Question Type: MultipleChoice

You are a Dynamics 365 Finance developer.

Users report that a sales table details form takes a long time to load and display data. You need to optimize the performance by implementing caching.

Which two actions should you perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

Options:

A- Associate all display and edit methods with the form data source instead of the table.

B- Call the FormDataSource.research method.

C- Call the FormDataSource.cacheAddMethod method.

D- Create display and edit methods on the table instead of the form data source.

Answer:

A, C

Question 6

Question Type: DragDrop

A company uses Dynamics 365 Commerce for sales and distribution operations.

The following reporting changes are required based on feedback from user acceptance testing:

- * Add a field to a business document template.
- * Adjust the location of the customer address on an SSRS report.

You need to implement the changes.

Which development tools should you use? To answer, drag the appropriate development tools to the correct requirements. Each development tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Development tools	Answer Area	Requirement	Development tool
<input type="checkbox"/> Power BI	<input type="checkbox"/>	Add a new field.	<input type="text"/>
<input checked="" type="checkbox"/> Answer Studio	<input type="checkbox"/>	Adjust the customer address location.	<input type="text"/>
<input type="checkbox"/> Microsoft 365	<input type="checkbox"/>		

Question 7

Question Type: MultipleChoice

A company requires Dynamics 365 finance and operations apps to notify third-party applications when data from purchase orders is available for consumption. You need to configure the trigger to capture the purchase order data. Which mechanism should you use?

Options:

- A- Batch framework
- B- SysTest framework
- C- Business event
- D- Data management framework

Answer:

A

Question 8

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is implementing Dynamics 365 finance and operations apps.

The company must test the functionality of its native Dynamics 365 finance and operations apps by using the Acceptance test library (ATL).

You need to implement ATL classes on test data within a development environment.

Solution: Create a set of navigation objects and creator classes to access entities and test data.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 9

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is implementing Dynamics 365 finance and operations apps.

The company must test the functionality of its native Dynamics 365 finance and operations apps by using the Acceptance test library (ATL).

You need to implement ATL classes on test data within a development environment.

Solution: Create command classes to run business practices. Call the classes by using the SysTest framework.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 10

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is implementing Dynamics 365 finance and operations apps.

The company must test the functionality of its native Dynamics 365 finance and operations apps by using the Acceptance test library (ATL).

You need to implement ATL classes on test data within a development environment.

Solution: Record business process steps and save as developer documentation by using Task recorder.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 11

Question Type: MultipleChoice

A company uses Dynamics 365 Finance. You implement an abstract class named Car. The Car class has the following:

- * A real member called weight that is used to store the weight of the car.
- * An abstract getWeight method that returns the value of the weight member.

The Car class code is:

```
public abstract class Car
{
    real weight;
    public abstract real getWeight()
    {
    }
}
```

You must create a child class named BigCar.

You need to implement the Car class by using the BigCar child class.

Which code segment should you use?

A.

```
class BigCar implements Car { void new(real _weight) { weight = _weight; } public real  
getWeight() { return weight; }}
```

B.

```
class BigCar extends Car { public real getWeight() { return weight; }}
```

C.

```
class BigCar : Car { void new(real _weight) { weight = _weight; } public real getWeight() {  
return weight; }}
```

D.

```
class BigCar extends Car { void new(real _weight) { weight = _weight; } public real getWeight()  
{ return weight; }}
```

Options:

A- Option A

B- Option B

C- Option C

D- Option D

Answer:

C

Question 12

Question Type: MultipleChoice

A company uses Dynamics 365 for its supply chain operations.

A client wants to ensure current processes do not break when the client receives Microsoft updates for Dynamics 365 finance and operations apps.

The company has no development capabilities.

You need to build the scenarios to automate the process by using the Regression suite automation tool (RSAT).

Which file type should you include to run the scenarios?

Options:

A- Business events schema

B- Security customization

C- Test automation/parameter

D- SysTest frame work

Answer:

C
