You have a Microsoft 365 tenant that uses Microsoft Intune and contains the devices shown in the following table.

Name	Platform
Device1	Windows 10
Device2	macOS

In Microsoft Intune Endpoint security, you need to configure a disk encryption policy for each device.

Which encryption type should you use for each device, and which role-based access control (RBAC) role in Intune should you use to manage the encryption keys? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Device1:

- FileVault
- Cryptsetup
- Encrypting File System (EFS)
- BitLocker Drive Encryption (BitLocker)

Device2:

- FileVault
- Cryptsetup
- Encrypting File System (EFS)
- BitLocker Drive Encryption (BitLocker)

RBAC role:

- Help Desk Operator
- Application Manager
- Intune Role Administrator
- Policy and Profile Manager

Question 2

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

MD-102 Mix Questions IN THIS CASE STUDY

You have a computer named Computer5 that has Windows 10 installed.

You create a Windows PowerShell script named config.ps1.

You need to ensure that config.ps1 runs after feature updates are installed on Computer5.

Which file should you modify on Computer5?

Options:

- A- LiteTouch.wsf
- B- SetupConfig.ini
- C- Unattendb*
- D- Unattend.xml

Answer:

B

Explanation:

SetupConfig.ini is a file that can be used to customize the behavior of Windows Setup during feature updates. You can use this file to specify commands or scripts that run before or after the installation process. To run a PowerShell script after a feature update, you can use the PostOOBE parameter in SetupConfig.ini and specify the path to the script file. Reference: [SetupConfig.ini reference]

Question 3

Mix Questions

MD-102 Mix Questions IN THIS CASE STUDY

You have a Microsoft 365 tenant that uses Microsoft Intune.

From the Microsoft Intune admin center, you plan to create a baseline to monitor the Startup score and the App reliability score of enrolled Windows 10 devices.

You need to identify which tool to use to create the baseline and the minimum number of devices required to create the baseline.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Tool to use:

	▼
Workloads	
Log Analytics	
Endpoint analytics	
Security baselines	

Minimum number of devices:

	▼
1	
5	
10	
25	

Answer:

Question 4

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

MD-102 Mix Questions IN THIS CASE STUDY

You have a Hyper-V host. The host contains virtual machines that run Windows 10 as shown in

following table.

Name	Generation	Virtual TPM	Virtual processors	Memory
VM1	1	No	4	16 GB
VM2	2	Yes	2	4 GB
VM3	2	Yes	1	8 GB

Which virtual machines can be upgraded to Windows 11?

Options:

- A- VM1 only
- B- VM2 only
- C- VM2 and VM3 only
- D- VM1, VM2, and VM3

Answer:

C

Explanation:

Windows 11 has certain hardware requirements that must be met in order to upgrade from Windows 10. Some of these requirements are as follows:

A processor with at least 1 GHz clock speed and 2 cores.

A system firmware that supports UEFI and Secure Boot.

A Trusted Platform Module (TPM) version 2.0 or higher.

At least 4 GB of system memory (RAM).

At least 64 GB of storage space.

In this scenario, the virtual machines that run Windows 10 have the following specifications:

VM1 is a generation 1 virtual machine with no virtual TPM, 4 virtual processors, and 16 GB of memory.

VM2 is a generation 2 virtual machine with a virtual TPM, 2 virtual processors, and 4 GB of memory.

VM3 is a generation 2 virtual machine with a virtual TPM, 1 virtual processor, and 8 GB of

memory.

VM1 cannot be upgraded to Windows 11 because it does not have a virtual TPM and it is not a generation 2 virtual machine. Generation 1 virtual machines do not support UEFI and Secure Boot, which are required for Windows 11. VM2 and VM3 can be upgraded to Windows 11 because they have a virtual TPM and they are generation 2 virtual machines. They also meet the minimum requirements for processor speed, cores, memory, and storage space.

Question 5

Question Type: Hotspot

Case Study: Mix Questions

Mix Questions

MD-102 Mix Questions IN THIS CASE STUDY

You have a Microsoft 365 subscription that uses Microsoft Intune and contains 100 Windows 10 devices. You need to create Intune configuration profiles to perform the following actions on the devices:

- * Deploy a custom Start layout.
- * Rename the local Administrator account.

Which profile type template should you use for each action? To answer, select the appropriate options in the answer area

a. NOTE: Each correct selection is worth one point.

Answer Area

Deploy a custom Start layout:

Device restriction	▼
Delivery optimization	
Device restriction	
Endpoint protection	
Identity protection	

Rename the local Administrator account:

Identity protection	▼
Delivery optimization	
Device restriction	
Endpoint protection	
Identity protection

MD-102 Mix Questions IN THIS CASE STUDY

You have an on-premises Active Directory domain that syncs to Azure AD tenant.

The tenant contains computers that run Windows 10. The computers are hybrid Azure AD joined and enrolled in Microsoft Intune.

The Microsoft Office settings on the computers are configured by using a Group Policy Object (GPO).

You need to migrate the GPO to Intune.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Assign the policy.
Create a compliance policy.
Set a scope tag to the policy.
Import an ADMX file.
Create a configuration profile.
Configure the Administrative Templates settings.
Assign the profile.

1	
2	
3	

Answer:

Create a configuration profile. Configure the Administrative Templates Settings. Assign the profile.
