Question 1

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A procurement department is using email to collect large volumes of quotes from vendors.

Data from quotes, including vendor data and quote terms, must be stored in Microsoft Dataverse.

You need to create a solution to automate the process.

Solution: Cloud flow using the Extract information from invoices AI Builder model

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

A

Question 2

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A procurement department is using email to collect large volumes of quotes from vendors.

Data from quotes, including vendor data and quote terms, must be stored in Microsoft Dataverse.

You need to create a solution to automate the process.

Solution: Extract custom information from documents AI Builder model

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

A

Question 3

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A procurement department is using email to collect large volumes of quotes from vendors. Data from quotes, including vendor data and quote terms, must be stored in Microsoft Dataverse. You need to create a solution to automate the process.

Solution: Cloud flow using the Extract most relevant words and phrases from text AI Builder model.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 4

Question Type: OrderList

You need to create several desktop flow processes on the same application.

Each process uses different sign-in data.

You need to create and use a standalone sign-in process.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Create sign-in actions in each process.
- Add Run desktop flow action in each process.
- Create sign-in process.
- Define input variables.
- Set input variables.
- Add Run subflow action in each process.

Steps to create a desktop flow process

Answer:

Define input variables in each process.

Question 5

Question Type: OrderList

You deploy a cloud flow to a production environment. You make changes to the cloud flow in a development environment

You import the updated solution to the production environment. You observe that the cloud flow is not updated.

You need to resolve the issue.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Remove all dependencies.
- Show solution layers.
- Select the cloud flow that was upgraded.
- Show dependencies.
- Remove all unmanaged layers.
- In the production environment, navigate to the solution contents.
- In the development environment, navigate to the solution contents.
