# Question 1

---

## Question Type: MultipleChoice

---

Identify two reasons for defining machines and assigning servers to them in WebLogic servers.

### Options:

---

- A-** A machine can be the proxy to a cluster.
- B-** A machine definition is required to configured figure the Node Manager.
- C-** To reference an instance of WebLogic Server, you must know its machine and port.
- D-** A machine is a required organizational unit. A domain contains machines and machines contain servers.
- E-** WebLogic Server users server machine assignments to help it choose servers in a cluster on which to replicate session state.
- F-** A machine's Cluster Weight attribute may be used by load balancers to help them determine how often to send requests to servers assigned to that machine.

### Answer:

---

B, E

## Question 2

---

**Question Type:** MultipleChoice

---

A WebLogic Server instance can have multiple network channels defined for it.

Each channel for the server must have a unique combination of two elements. Identify these two elements.

### Options:

---

- A- Tunneling enabled
- B- Listen address
- C- Listen port
- D- Outbound enabled
- E- Channel weight

### Answer:

---

B, C

## Question 3

---

**Question Type: MultipleChoice**

---

You see a script called start WebLogic.sh(.cmd in Windows) in the root folder of your domain.

What does this script do?

**Options:**

---

- A- Starts a machine
- B- Starts Node Manager
- C- Starts a Managed server
- D- Calls the startwebLogic.sh script in the domain's bin directory
- E- Calls the startManagedWebLogic.sh script in the domains bin directory

**Answer:**

---

D

## Question 4

---

**Question Type: MultipleChoice**

---

Consider a domain that includes a dynamic cluster of three servers. Your network administrator requires all servers to bind the specific domain name mycompany.com.

Which Administration console action implements this requirement?

**Options:**

---

- A- Use a \$(macro)in the server templates listen address.
- B- Assign each dynamic server a separate machine.
- C- Create multiple server templates for the cluster.
- D- Update the cluster's listen address prefix.

**Answer:**

---

A

## Question 5

---

**Question Type: MultipleChoice**

---

The startup of a Weblogic Server instance fails with the error message:

jav

a.net.BindException:Address already in use

Which two methods help identify what is currently listening at the port and the Ip this server is configured to be bound to?

### Options:

---

- A- The pmap command lists all processes running with their associated port member.
- B- The UNIX 1sof command can report information on the process that is listening at a particular IP and port.
- C- netstat, which is available on Windows and Linux/UNIX, can report on the process bound to this IP and port.
- D- Pstat will report detailed runtime statistics on any process currently listening at this IP and port.
- E- The Linux port watching tool port info can raise an alert anytime a process attempts. succeeds, or fails to connect to a specific IP and port. It can also be used to identify if a port is being used by a java process.

### Answer:

---

B, C

## Question 6

---

Question Type: MultipleChoice

---

Which two metrics are used to monitor and troubleshoot unicast communication in a cluster?

**Options:**

---

- A- Groups
- B- Master
- C- Backup server
- D- Session Replicas
- E- Local Group Leader

**Answer:**

---

A, E

## Question 7

---

**Question Type:** MultipleChoice

---

Each domain has a directory called servers that contains subdirectories for each server in the domain. Your domain has a managed server managed managed1.

When will the managed1 directory be created?

**Options:**

---

- A- When the managed1 server is defined in the Configuration WIZARD
- B- When the domain is created
- C- When the Administration server comes up for the first time
- D- When the managed1 server comes up for the first time

**Answer:**

---

D
