Question 1

Which capacity license does an administrator get with a pay-as-you-go license on Public Cloud market places?

Options:

A- VM-100

B- VM-1000

C- VM-300

D- VM-200

Answer:

A

Question 2

Which option describes Arista's micro-segmentation?

A- Arista and VMware are extending secure segmentation with an open API (RESTZJSON)-based exchange, which allows NSX to federate with CloudVision to extend the micro-segmentation policy for physical workloads.

B- Arista and Kubernetes are extending secure segmentation with an open API (RESTVJSON)-based exchange, which allows Kubernetes to federate with CloudVision to extend the micro-segmentation policy for physical workloads.

C- Arista's micro-segmentation and macro-segmentation are identical concepts that can be used interchangeably

D- Arista and VMware both perform identical functions for NGFW micro-segmentation

Answer:

B

Question 3

Question Type: MultipleChoice

Which VM-Series can be deployed on Amazon Web Services (AWS)?

Options:

A- Can deploy any VM-Series except the VM-50

B- Only VM-100, VM-200 and VM-300

C- Any VM-Series model

D- Any VM-Series model except the VM-700

Answer:

C

Question 4

Question Type: **MultipleChoice**

Which interface mode do you use to generate the statdump file that can be converted into an SLR? Assume that the SE wants to make the evaluation as unintrusive as possible.

Options:

A- Virtual Wire

B- Layer 2

C- TAP

D- Layer 3

Answer:

C

Question 5

Question Type: MultipleChoice

Which is not a SaaS product?

Options:

A- Yahoo Maps

B- Microsoft Office 365

C- Microsoft Azure

D- Google Docs

Answer:

C

Question 6

Question Type: **MultipleChoice**

Which configuration is required to share NSX security groups as tags to be used by Dynamic Address Groups in a non-NSX firewall?

Options:

A- notify device groups within VMware Services Manager

B- a User-ID agent on a Windows domain server

C- VMware Information Sources

D- none, sharing happens by default

Answer:

B

Question 7

Which three deployment modes of VM-Series firewalls are supported across NSX-T? (Choose three)

Options:

A- Partner Service

B- Boot Strap

C- Prism Central

D- Tier-1 insertion
E- Tier-0 insertion

Answer:

A, D, E

Explanation:

You can deploy one or more instances of the VM-Series firewall as a partner service in your VMware NSX-T Data Center. Attach a VM-Series firewall to any tier-0 or tier-1 logical router to protect north-south traffic. You can deploy the VM-Series firewall as standalone service instance or two firewalls in a high-availability (HA) pair. Panorama manages the connection with NSX-T Manager and the VM-Series firewalls deployed in your NSX-T software-defined datacenter.

Tier-0 Insertion---Tier-0 insertion deploys a VM-Series firewall to a tier-0 logical router, which processes traffic between logical and physical networks. When you deploy the VM-Series firewall with tier-0 insertion, NSX-T Manager uses the deployment information you configured on Panorama to attach a firewall to a tier-0 logical router in virtual wire mode.

Tier-1 Insertion---Tier-1 insertion deploys a VM-Series firewall to a tier-1 logical router, which provides downlink connections to segments and uplink connection to tier-0 logical routers. NSX-T Manager attaches VM-Series firewalls deployed with tier-1 insertions to a tier-1 logical router in virtual wire mode.

After deploying the firewall, you configure traffic redirection rules that send traffic to the VM-Series firewall when crossing a tier-0 or tier-1 router. Security policy rules that you configure on Panorama are pushed to managed VM-Series firewalls and then applied to traffic passing through the firewall.

Question 8

Question Type: **MultipleChoice**

What is the default session distribution policy in the PA-7000 Series?

Options:

A- Hash

B- Egress-Slot

C- Round Robin

D- Ingress-Slot

Answer:

D

Explanation:

(

PA-7000 Series firewalls only

) New sessions are assigned to a DP on the same NPC on which the first packet of the session arrived. The selection of the DP is based on the session-load algorithm but, in this case, sessions are limited to the DPs on the ingress NPC.

Depending on the traffic and network topology, this policy generally decreases the odds that traffic will need to traverse the switch fabric.

Use this policy to reduce latency if both ingress and egress are on the same NPC. If the firewall has a mix of NPCs (PA-7000 20G and PA-7000 20GXM for example), this policy can isolate the increased capacity to the corresponding NPCs and help to isolate the impact of NPC failures.

Question 9

What is the major decision factor that customers use when selecting a managed container platform such as AS/EKS/GKE?

Options:

A- licensing costs

B- enhanced capabilities not available in vanilla K8s

C- no need to manage containers, just the application code.

D- reduced operational costs and management overhead

Answer:

B

Question 10

Which three advantages of the Palo Alto Networks platform architecture are used to enable security orchestration in SDN? (Choose three)

Options:

A- a full set of APIs enabling programmatic control of policy and configuration

B- NVGRE support for advanced VLAN integration

C- integration with leading orchestration platforms: VMware NSX. OpenStack. and Cisco ACI

D- Dynamic Address Groups to adapt Security policies dynamically

E- VXLAN support for network-layer abstraction

Answer:

C, D, E

Question 11

Question Type: MultipleChoice

Which VM-Series can be deployed on VMware NSX?

Options:

A- VM-100, VM-200, VM-300. VM-500. VM-1000-HV

B- VM-50r VM-100, VM-200, VM-300, VM-500

C- VM-100, VM-200, VM-300, VM-500, VM-700

D- All VM Series Models can be deployed on VMware NSX

Answer:

A

Explanation:

https://docs.paloaltonetworks.com/vm-series/8-1/vm-series-deployment/about-the-vm-series-firewall/vm-series-models.html
