Question 1

Question Type: MultipleChoice

A form listing nearby restaurants has four columns:

Restaurant name

Restaurant location

Thumbnail image of the seating area

Make reservation (check box)

You want to ensure that users have the information they need to make a reservation regardless of screen size. When viewed on a small screen, you do not need to display images.

What three configuration steps do you take to support this requirement? (Choose three.)

Options:

A- Set the importance of the Make reservation column to Primary.

B- Set the importance of the Restaurant name column to Primary.

C- Set the importance of the image column to Other.

- D-** Set the importance of the image column to Secondary.
- E-** Set the importance of the Restaurant location and Make reservation columns to Secondary.
- F-** Set the importance of the Restaurant name and Make reservation columns to Primary.

Answer:

B, D, F

Question 2

Question Type: MultipleChoice

An online sales application supports both laptop and mobile devices. You are configuring the application skin and you notice the responsive layout in the mobile device is not displaying views as stakeholders require.

Which two options allow you to resolve this situation without negatively impacting the laptop users? (Choose two.)

Options:

- A-** Use the same application skin in all portals.
- B-** Update the process to give mobile users a separate portal.

C- Do not use a skin for the mobile application version.

D- Adjust the responsive behavior in the skin for optimal viewing in the mobile portal.

Answer:

A, D

Question 3

Question Type: MultipleChoice

You are designing a form for an online bookstore to display new arrivals. In the form, the book cover pictures are displayed in a row, like words in a sentence. Once the row reaches the full width of the screen, it wraps around to begin a new row.

Which layout do you use to display the book cover pictures?

Options:

A- Screen layout

B- Column layout

C- Dynamic layout

D- Repeating layout

Answer:

C

Question 4

Question Type: MultipleChoice

An organization has two lines of business: selling books for children and reselling college textbooks.

The division selling books for children can use the same basic user interface (UI) as the division reselling textbooks with the exception of the payment methods.

How do you apply the Situational Layer Cake™ in this scenario?

Options:

A- Place the UI rules in the base layer, and create a new layer for the payment rules for both lines of business.

B- Place the UI rules and generic payment method rules in the base layer, and create a new layer for the division-specific payment rules.

C- Place the UI rules in the base layer, and create a parallel base layer for the payments rules.

D- Place the UI rules in the base layer, and create a new layer for the payment rule for each division.

Answer:

B

Question 5

Question Type: DragDrop

Select each task on the left and drag it to the corresponding Application Development Studio on the right, where the task can be completed.

<u>Task</u>	<u>Task</u>	<u>Application Development Studio</u>
Review real-time UI designs with stakeholders.		App Studio
Monitor the cloud-based production system at run-time.		Dev Studio
Configure application security, versioning, and source control.		Admin Studio
Globally configure the setting for an Artificial Intelligence model.		Prediction Studio

Question 6

Question Type: MultipleChoice

Your application is deployed to the cloud. A data source outside your application populates a data page by using your data access pattern configuration. You receive complaints that the system takes a long time to fetch data each time the case worker accesses information for a different customer.

Which approach solves this performance issue?

Options:

- A- Move to local installation because network traffic in cloud deployment is often slow.
- B- Change snapshot data access method to reference pattern data access method.
- C- Fetch only the targeted data from the database each time data is needed so access is faster.
- D- Access data page with a predefined key so that, once loaded, data access is faster.

Answer:

B
