Question 1

Question Type: MultipleChoice

A developer is writing a server side script that needs to maintain state across calls. The persistent information needed includes these items.

- * The current customer
- * Whether or not the customer is authenticated
- * The privacy attributes (such as tracking consent or cookie policy)

Which technique should the developer use to maintain state in an efficient and scalable manner that follows best practice?

Options:

- A-** Use a non-replicable Custom Object to store the information temporarily.
- B-** Use the Session class in the B2C Commerce api.
- C-** Use an SFRA controller, because it runs server-side, the state is automatically maintained
- D-** Use a client-side cookie to store the information for the session duration.

Answer:

B

Question 2

Question Type: MultipleChoice

Which two items are appropriate content of custom logs implemented at checkout?

Choose 2 answers:

Options:

- A- Customer's password at post-checkout sign up
- B- Order failure information
- C- Transaction's credit card information
- D- Payment gateway service response code

Answer:

B, D

Question 3

Question Type: MultipleChoice

Which three configuration does a developer need to ensure to have a new product visible in the Storefront?

Choose 3 answers

Options:

- A-** The product has a Price
- B-** The Storefront catalog that contains the product is assigned to a site
- C-** The product has a master product
- D-** The product is online and searchable
- E-** The search index is built.

Tengo dudas con el A. REVISAR

Answer:

B, D, E

Question 4

Question Type: MultipleChoice

A Newsletter controller contains the following route:

```
Server.post('Subscribe', function (req,res,next){  
  
var newsletterForm = server.forms.getForm('newsletter');var CustomObjectMgr = require('dw/object/CustomObjectMgr');  
  
if(newsletterForm.valid){  
  
try{  
  
var CustomObject =  
  
CustomObjectMgr.createCustomObejct('NewsletterSubscription', newsletterform.email.value);  
  
CustomObject.custom.firstName = newsletterForm.fname.value;  
  
CustomObject.custom.lastName = newsletterForm.lname.value;-  
  
} catch(e){  
  
//Catch error here
```

```
}  
  
}  
  
next();  
  
});
```

Assuming the Custom Object metadata exists, why does this route fail to render the newsletter template when the subscription form is correctly submitted?

Options:

- A-** Custom Objects can only be created by Job scripts
- B-** The Subscribe route is missing the server.middleware.httppt middleware.
- C-** The CustomObjectMgr variable should be declare outside of the route.
- D-** The Custom Object creation is not wrapped in a Transaction.

Answer:

D

Question 5

Question Type: MultipleChoice

A merchant has a requirement to sell a combination of four existing products with a unique product ID.

This collection will be known as 'Our Top Combo', and is based on the merchant's trading information that shows this combination to be in high demand.

What does the developer need to do next to fulfill this requirement?

Options:

- A-** Create a unique product called 'Our Top Combo' and add the four products into the Product Bundles tab.
- B-** Create a Content Slot with Content Type = Product and add the four component products into that slot.
- C-** Create a Product Set called 'Our Top Combo' and add the products into the set.
- D-** Create a recommendation rule associating the four products as a recommendation group.

Answer:

A

Question 6

Question Type: MultipleChoice

When inspecting the weekly service status report for a critical internally hosted web service used in the application, a developer notices that there are too many instances of unavailability.

Which two solutions can reduce the unavailability of the service?

Choose 2 answers.

Options:

- A-** Update the service to have a faster response time.
- B-** Modify the code that makes the request to the external service to be wrapped in a try/catch block.
- C-** Increase the web service time out
- D-** Change the code that sets the `throwOnError` attribute of the service to be true.

Answer:

A, C

Question 7

Question Type: MultipleChoice

A developer has a sandbox configured with a service and its profile and credential. Now there is a requirement to allow changes to the service URL manually from the sandbox.

Which B2C feature should the developer use to achieve the request?

Options:

- A-** Use the service credential URL field
- B-** Use the service status area, set the override URL checkbox, and then populate the URL field with the required one.
- C-** Use a Sitepreference dedicated for the service URL
- D-** Use a Globalpreference dedicated for the service URL

Answer:

A

Question 8

Question Type: MultipleChoice

To ensure SFRA best practices and protect against request forgery, the developer introduced CSRF token generation in the customer address form:

```
value = "${dw.web.CSRFProtection.generateToken()}>
```

...

...

To implement CSRF protection when the form is submitted, the developer needs to introduce the CSRF validation using one or both of these methods as applicable:

validateRequest

validateAjaxRequest

Where in the code does the developer need to add this CSRF validation check?

Options:

- A- In the controller function that displays the form
- B- In the middleware chain of the controller post route
- C- In the controller function that handles the submitted form
- D- In the model function that persists the form data

Answer:

B
