Question 1

Question Type: MultipleChoice

The client provides the system integrator with translation messages for the newly added "French" ("fr") locale.

What is the correct folder to store the associated .properties files?

Options:

- A- cartridge/templates/fr
- B- A cartridge/templates/resources
- C- cartridge/resources
- D- cartridge/templates/resources/fr

Answer:

B

Question 2

Question Type: MultipleChoice

A developer needs to perform the same additional checks before completing multiple routes in a custom controller, in order to decide whether to render a template or redirect the user to a different page.

According to SFRA best practices, what is the correct approach to improve code reusability in this scenario?

Options:

- A- Define a new middleware function and use it in the existing routes.
- B- Append a new function to all the existing routes with the server module.
- C- Replace the existing routes by creating a controller in separate new cartridge.
- D- Use the superModule property in the existing routes to extend their functionality.

Answer:

A

Question 3

Question Type: MultipleChoice

The developer is asked to enhance the functionality of an existing controller route by adding information to the response's viewData.

How should the developer approach this task while following SFRA best practices?

Options:

- A-** Replace the callback function of the existing route using superModule.
- B-** Use the 'extend' method of the server module for the existing route.
- C-** Copy the existing route in a new cartridge and modify where necessary.
- D-** Use the 'append' method of the server module for the existing route.

Answer:

B

Question 4

Question Type: MultipleChoice

A developer needs to display a products list of their "Women Dresses" category in a new web application, independent of their main B2C Commerce site. This custom listing page needs to be styled differently from the existing one, as per marketing requirements.

Which B2C Commerce tool should the developer use to collect the necessary information?

Options:

- A- The ProductSearch resource of the Shop OCAPI.
- B- The existing category's endpoint to perform a REST call.
- C- The iframe of the existing category page.
- D- The Search-Show Controller URL to perform a web crawl.

Answer:

D

Question 5

Question Type: MultipleChoice

A client has two B2C Commerce sites in the same instance: one for the U.S market, the other for the European market. The products they make are sold with different safety certificates based-on the world location.

For example, they sell a smartphone with certificate A in the U.S and certificate B in Europe, a

hairdryer with certificate C in the U.S and certificate D in Europe, and more.

How should a developer allow the merchant to display the appropriate certification logo in the produce to details page, depending on the customer's location?

Options:

- A- Add a Localizable custom attribute to the Certificate system object type.
- B- Add an Image custom preference to the SitePreference system object type
- C- Add a Site-specific custom attribute to the Product system object type.
- D- Add a Localizable custom preference to the SitePreference system object type.

Answer:

C

Question 6

Question Type: MultipleChoice

A Storefront is designed so that multiple pages share a common header and footer layout.

Which ISML tag should a developer use on the templates for these pages to avoid code repetition in the most effective way?

Options:

A- <isdecorate> ... </isdecorate>

B- <iscontent> ... </iscontent>

C- <isreplace> ... </isreplace>

D- <isinclude> ... </isinclude>

Answer:

A

Question 7

Question Type: MultipleChoice

Which three operations should be done in a controller?

Choose 3 answers

Options:

- A- Generate the response as JSON or HTML
- B- Use the Script API to generate data for the view.
- C- Use middleware functions when applicable
- D- Create a plain JavaScript object representing a system object
- E- Use the model needed for the view.

Answer:

A, C, E

Question 8

Question Type: MultipleChoice

A developer is writing a server side script that needs to maintain state across calls. The persistent information needed includes these items.

- * The current customer
- * Whether or not the customer is authenticated

* The privacy attributes (such as tracking consent or cookie policy)

Which technique should the developer use to maintain state in an efficient and scalable manner that follows best practice?

Options:

- A- Use a non-replicable Custom Object to store the information temporarily.
- B- Use the Session class in the B2C Commerce api.
- C- Use an SFRA controller, because it runs server-side, the state is automatically maintained
- D- Use a client-side cookie to store the information for the session duration.

Answer:

B

Question 9

Question Type: MultipleChoice

Which two items are appropriate content of custom logs implemented at checkout?

Choose 2 answers:

Options:

- A- Customer's password at post-checkout sign up
- B- Order failure information
- C- Transaction's credit card information
- D- Payment gateway service response code

Answer:

B, D

Question 10

Question Type: MultipleChoice

Which three configuration does a developer need to ensure to have a new product visible in the Storefront?

Choose 3 answers

Options:

- A- The product has a Price
- B- The Storefront catalog that contains the product is assigned to a site
- C- The product has a master product
- D- The product is online and searchable
- E- The search index is built.

Tengo dudas con el A. REVISAR

Answer:

B, D, E
