C- By default a custom event only propagates to it's immediate container.

D- Data may be passed in the payload of a custom event using a property called detail.

Answer:

B, D

Question 2

Question Type: MultipleChoice

Universal Containers has a Visualforce page that displays a table of every Container__c being rented by a given Account. Recently this page is failing with a view state limit because some of the customers rent over 10,000 containers.

What should a developer change about the Visualforce page to help with the page load errors?

Options:

A- Use JavaScript remotlng with SOQL Offset.

B- Implement pagination with a StandardSetController.

C- Implement pagination with an OffaetController.

D- Use lazy loading and a transient List variable.

Answer:

B

Question 3

Question Type: **MultipleChoice**

A developer needs to make a custom Lightning Web Component available in the Salesforce Classic user interface.

Which approach can be used to accomplish this?

Options:

A- Wrap the Lightning Web Component In an Aura Component and surface the Aura Component as a Visualforce tab.

B- Embed the Lightning Web Component is a Visualforce Component and add directly to the page layout.

C- Use the Lightning Out JavaScript library to embed the Lightning Web Component in a Visualforce page and add to the page layout.

D- Use a Visualforce page with a custom controller to invoke the Lightning Web Component using a call to an Apex method.

Answer:

C

Question 4

Question Type: MultipleChoice

A developer created a Visualforce page and custom controller to display the account type field as shown below.

Custom controller code:

```
public with sharing class customCtrlr{
   private Account theAccount;
   public String actType;

   public customCtrlr() {
        theAccount = [SELECT Id, Type FROM Account
                      WHERE Id = :ApexPages.currentPage().getParameters().get('id')];
        actType = theAccount.Type;
    }
}
```

Visualforce page snippet:

```
The Account Type is {!actType}
```

The value of the account type field is not being displayed correctly on the page. Assuming the custom controller is properly referenced on the Visualforce page, what should the developer do to correct the problem?

Options:

A- Convert theAcccunt, type to a String.

B- Change theAccount attribute to public.

C- Add with sharing to the custom controller.

D- Add a getter method for the actType attribute.

Answer:

D

Question 5

Question Type: MultipleChoice
