## Question 1

---

**Question Type:** MultipleChoice

---

Which action triggers the 180 Ringing response in a User Agent Client (UAC)?

### Options:

---

- A- the subscription to a SIP presence service
- B- the generation of a remote ring-back tone
- C- the generation of a local ring-back tone
- D- the establishment of a SIP session
- E- the termination of a SIP session

### Answer:

---

C

## Question 2

---

**Question Type:** MultipleChoice

---

You configured the Session Agent Group (SAG) element. You want the Session Agent to be selected in the order in which they are listed in the destination list, with each agent selected in turn, one per session.

How would you accomplish this?

**Options:**

---

- A- Navigate to the session-agent configuration element and set the strategy parameter to sequential.
- B- Navigate to the session-agent configuration element and set the strategy parameter to propdist.
- C- Navigate to the session-agent configuration element and set the strategy parameter to hunt.
- D- Navigate to the session-agent configuration element and set the strategy parameter to roundrobin.
- E- Navigate to the session-agent configuration element and set the strategy parameter to leastbusy.

**Answer:**

---

D

## Question 3

---

**Question Type:** MultipleChoice

---

Which three statements are true about SIP, per RFC 326? (Choose three.)

**Options:**

---

- A- SIP does not provide for resource reservation.
- B- SIP defines native methods for negotiating media streams.
- C- A SIP transaction occurs between a client and a server.
- D- To set up a voice session, SIP relies on protocols such as SDP and RTP.
- E- SIP signaling can only be used for voice over IP thereby limiting its use as a general signaling protocol.

**Answer:**

---

C, D, E

## Question 4

---

**Question Type:** MultipleChoice

---

What mechanism is used to ensure adjacent devices can redirect their Ethernet traffic to the Session Border Controller that takes over, when a Session Border Controller fails over?

**Options:**

---

**A-** Gratuitous ARP

**B-** Reverse ARP

**C-** Proxy ARP

**D-** HSRP

**E-** BOOTP

**Answer:**

---

B

## Question 5

---

**Question Type:** MultipleChoice

---

Which two functionalities are provided by Session Border Controllers? (Choose two.)

**Options:**

---

- A- they span multiple networks and provide edge proxy functions between them
- B- they are session-aware devices that enable control of end-to-end interactive communications across PSTN network borders
- C- they enable premium interactive services across IP network borders by complementing existing edge routers
- D- they provide routing functions for IP, TCP, and SMTP using application parameters.
- E- they replace typical edge routers and firewalls in order to provide a unified network border for signaling and media control

**Answer:**

---

A, C

## Question 6

---

**Question Type:** MultipleChoice

---

You are configuring access rules in a Session Border Controller Peering architecture.

Which configuration step is required to allow access from any User Agent (UA)?

**Options:**

---

- A-** Navigate to the sip-port configuration element and set the allow-anonymous parameter to all.
- B-** Navigate to the realm-config configuration element and set the addr-prefix parameter to the IP subnet of your trusted User Agent (UA).
- C-** Navigate to the sip-port configuration element and set the allow-anonymous parameter to address-prefix.
- D-** Navigate to the session-agent configuration element and set the ip-address parameter to the IP subnet of your trusted User Agent (UA).
- E-** Navigate to the sip-port configuration element and set the allow-anonymous parameter to agents-only.

**Answer:**

---

A

## Question 7

---

**Question Type: MultipleChoice**

---

What configuration step is required for booting the Session Border Controller from an external FTP server?

**Options:**

---

- A-** Navigate to the bootparams configuration branch and set the host inet field to the IP address of the external BOOTP Server from which the Session Border Controller can boot.

- B-** Navigate to the system configuration branch and set the ip address field of the wancom1 management interface.
- C-** Navigate to the bootparams configuration branch and set the ip address field of the destination SIP device with which the Session Border Controller needs to interact.
- D-** Navigate to the system configuration branch and set the ip address field of the wancom0 management interface.
- E-** Navigate to the bootparams configuration branch, set the host inet or Host IP, FTP username, and FTP password for the external FTP Server in which the image file resides.

**Answer:**

---

C

## Question 8

---

**Question Type: MultipleChoice**

---

You are configuring access rules in a Session Border Controller Peering architecture.

Which configuration step is required to allow access from any User Agent (UA)?

**Options:**

---

- A-** Navigate to the sip-port configuration element and set the allow-anonymous parameter to all.
- B-** Navigate to the realm-config configuration element and set the addr-prefix parameter to the IP subnet of your trusted User Agent (UA).
- C-** Navigate to the sip-port configuration element and set the allow-anonymous parameter to address-prefix.
- D-** Navigate to the session-agent configuration element and set the ip-address parameter to the IP subnet of your trusted User Agent (UA).
- E-** Navigate to the sip-port configuration element and set the allow-anonymous parameter to agents-only.

**Answer:**

---

A

## Question 9

---

**Question Type: MultipleChoice**

---

After configuring Header Manipulation Rules (HMRs) for topology hiding, your subsequent testing shows that the manipulation is not taking effect.

Identify two causes for this (Choose two.)

**Options:**

---

- A-** You have not configured the out-manipulationid parameter of the sip-interface configuration element.
- B-** You have not enabled policy-based realm-bridging.
- C-** The value of the name parameter in the header-rule configuration element is different than the value of the out-manipulationid parameter in the sip-interface configuration element.
- D-** The value of the match-val-type parameter is not written correctly.
- E-** The home-proxy-address value does not match the \$LOCAL\_IP value in the new-value parameter.

**Answer:**

---

A, E

## Question 10

---

**Question Type: MultipleChoice**

---

The Session Border Controller needs to be configured to act as a Back-to-Back User Agent (B2BUA).

How would you accomplish this?

**Options:**

---

- A- Navigate to the sip-config configuration element and set the operation-mode to stateless.
- B- Navigate to the sip-config configuration element and set the operation-mode to dialog.
- C- Navigate to the sip-config configuration element and set the operation-mode to stateful.
- D- Navigate to the session-router configuration element and set the operation-mode to dialog.
- E- Navigate to the session-router configuration element and set the operation-mode to none.

**Answer:**

---

B
