Question 1

Question Type: MultipleChoice

The initial performer of a task is determined by the role associated with the swim lane in which the task is modeled except when you use a(n) _____.

Options:

- A- complex task
- B- user task
- C- FYI task
- D- group task

Answer:

A

Explanation:

A complex user task uses a complex routing flow that is defined within the humantask. BPM Studio offers a number of human task patterns out of the box, to make it easy to implement the most common types of human tasks. For example, the Simple pattern just

assigns individual users or groups. The Management pattern is used for a sequential list of approvers up the management chain. Initiator is for the person who kicks off the process. For most of these, swimlane roles are used to determine assignments. For the Complex task, however, the swimlane is irrelevant, and routing and assignments are typically more complicated. Note: Swimlanes are the horizontal lines that run across the process editor. All flow objects must be placed within a swimlane. Swimlanes can also be used to group flow objects based on the roles defined within your process. Swimlanes that contain user tasks must have roles assigned to them. Swimlanes visually display the role responsible for performing each flow object within your process. Additionally, you can have multiple swimlanes that are assigned to the same role. Swimlanes can make your process more readable when you must use the same role in different parts of the same process.

Question 2

Question Type: MultipleChoice

Which two statements are correct on the use of business objects in a BPM project? (Choose two.)

Options:

- A- A business object is defined by a complex data type.
- B- Business objects are often defined in WSDL documents.
- C- A business object can inherit data and behavior from a parent business object.

D- You can create a business object at either the project level or the process level.

Answer:

B, C

Question 3

Question Type: MultipleChoice

Which pattern is best handled by using Adaptive Case Management?

Options:

A- straight-through processing requiring no manual intervention

B- deterministic, human-centric processes

C- knowledge-based work requiring collaboration

D- application integration processes

Answer:

C

Question 4

Question Type: MultipleChoice

When automatically generating an ADF form from a human task, the difference between using the "Auto-Generate Task Form" and the "Launch Task Form Wizard" is that the _____.

Options:

- A-** "Launch Task Form Wizard" option launches a six-step "BPM Custom Form Wizard" and the "Auto-Generate" option creates the ADF project, task flow, and ADF form with one key click
- B-** "Launch Task Form Wizard" option does not create a new ADF project every time it is run
- C-** "Auto-Generate" option gives you the choice to use an existing ADF page template as the form is being created.
- D-** "Launch Task Form Wizard" option automatically creates an ADF page template and task flow template

Answer:

D

Question 5

Question Type: MultipleChoice

Which human workflow service is used to get the list of outcomes defined for a task?

Options:

- A- IRuntimeConfigService
- B- ITaskQueryService
- C- ITaskService
- D- ITaskMetadataService

Answer:

B

Explanation:

Query the list of tasks using ITaskQueryService.

Question 6

Question Type: MultipleChoice

You have a requirement to dynamically assign tasks at run time based on the employee's title. Which three could be used to accomplish this assignment? (Choose three.)

Options:

- A-** Use parametric roles to map the individual parametric role assignments and then map individual users to specific titles in the workspace using extended user properties.
- B-** Use parametric roles to map the individual parametric role assignments and then map LDAP groups to specific titles in the workspace using extended user properties.
- C-** In LDAP, ensure that individual users have been given titles and, in the workspace, associate the LDAP title attribute to a parametric role.
- D-** Use a business rule in the human task to dynamically assign work items to specific users or an LDAP group based on employee title.
- E-** In the process, edit the properties of the swimlane and assign a "title" string data object in the process payload to define a parametric role.

Answer:

A, B, D

Question 7

Question Type: MultipleChoice

Which statement is true about a case activity that is defined as "Automatic" and "Conditional"?

Options:

- A-** The activity is run automatically as soon as the case starts.
- B-** The activity is run by the system only after it is initiated by the user.
- C-** The activity is automatically run by the system as soon as it is activated by a case rule.
- D-** Only a BPMN case activity can be defined as "Automatic" and "Conditional".

Answer:

B

Question 8

Question Type: MultipleChoice

Which two features are provided on the Tasks page of Business Process Workspace?

Options:

- A- Display Status for Adaptive Case Management (ACM) cases.
- B- View human tasks based on the user's permissions and assigned groups and roles.
- C- Create personal to-do tasks that are unassociated with a process instance.
- D- View who is currently assigned to a task that the current user has completed.

Answer:

B, C

Explanation:

The Tasks page displays tasks for the user based on the user's permissions and assigned groups and roles.

Perform authorized actions on tasks in the worklist, acquire and check out shared tasks, define personal to-do tasks, and define subtasks.
