Question 1

Question Type: MultipleChoice

A merchant has a requirement to sell a combination of four existing products with a unique product ID.

This collection will be known as 'Our Top Combo', and is based on the merchant's trading information that shows this combination to be in high demand.

What does the developer need to do next to fulfill this requirement?

Options:

- A-** Create a unique product called 'Our Top Combo' and add the four products into the Product Bundles tab.
- B-** Create a Content Slot with Content Type = Product and add the four component products into that slot.
- C-** Create a Product Set called 'Our Top Combo' and add the products into the set.
- D-** Create a recommendation rule associating the four products as a recommendation group.

Answer:

A

Question 2

Question Type: MultipleChoice

When inspecting the weekly service status report for a critical internally hosted web service used in the application, a developer notices that there are too many instances of unavailability.

Which two solutions can reduce the unavailability of the service?

Choose 2 answers.

Options:

- A-** Update the service to have a faster response time.
- B-** Modify the code that makes the request to the external service to be wrapped in a try/catch block.
- C-** Increase the web service time out
- D-** Change the code that sets the `throwOnError` attribute of the service to be true.

Answer:

A, C

Question 3

Question Type: MultipleChoice

A developer has a sandbox configured with a service and its profile and credential. Now there is a requirement to allow changes to the service URL manually from the sandbox.

Which B2C feature should the developer use to achieve the request?

Options:

- A-** Use the service credential URL field
- B-** Use the service status area, set the override URL checkbox, and then populate the URL field with the required one.
- C-** Use a Sitepreference dedicated for the service URL
- D-** Use a Globalpreference dedicated for the service URL

Answer:

A

Question 4

Question Type: MultipleChoice

To ensure SFRA best practices and protect against request forgery, the developer introduced CSRF token generation in the customer address form:

```
value = "${dw.web.CSRFProtection.generateToken()}>
```

...

...

To implement CSRF protection when the form is submitted, the developer needs to introduce the CSRF validation using one or both of these methods as applicable:

validateRequest

validateAjaxRequest

Where in the code does the developer need to add this CSRF validation check?

Options:

- A- In the controller function that displays the form
- B- In the middleware chain of the controller post route
- C- In the controller function that handles the submitted form
- D- In the model function that persists the form data

Answer:

B

Question 5

Question Type: MultipleChoice
