## Question 1

---

**Question Type:** MultipleChoice

---

A developer must perform a complex SOQL query that joins two objects in a Lightning component. How can the Lightning component execute the query?

### Options:

---

- A- Create a flow to execute the query and invoke from the Lightning component
- B- Write the query in a custom Lightning web component wrapper and invoke from the Lightning component,
- C- Invoke an Apex class with the method annotated as @AuraEnabled to perform the query.
- D- Use the Salesforce Streaming API to perform the SOQL query.

### Answer:

---

B

## Question 2

---

**Question Type:** MultipleChoice

---

A Developer Edition org has five existing accounts. A developer wants to add 10 more accounts for testing purposes.

The following code is executed in the Developer Console using the Execute Anonymous window:

```
Account myAccount = new Account(Name = 'MyAccount');
insert myAccount;

Integer x = 1;
List<Account> newAccounts = new List<Account>();
do {
    Account acct = new Account (Name = 'New Account ' + x++);
    newAccounts.add(acct);
} while (x < 10);
```

How many total accounts will be in the org after this code is executed?

**Options:**

---

- A- 5
- B- 6
- C- 10
- D- 15

**Answer:**

---

C

## Question 3

---

**Question Type:** MultipleChoice

---

A developer needs to allow users to complete a form on an Account record that will create a record for a custom object.

The form needs to display different fields depending on the user's job role. The functionality should only be available to a small group of users.

Which three things should the developer do to satisfy these requirements?

Choose 3 answers

**Options:**

---

**A-** Create a Dynamic Form,

**B-** Add a Dynamic Action to the Account Record Page.

**C-** Create a Custom Permission for the users.

**D-** Add a Dynamic Action to the Users' assigned Page Layouts.

**E-** Create a Lightning web component.

**Answer:**

---

A, B, C

## Question 4

---

**Question Type: MultipleChoice**

---

Given the following Apex statement:

```
Account myAccount = [SELECT Id, Name FROM Account];
```

What occurs when more than one Account is returned by the SOQL query?

**Options:**

---

**A-** The query fails and an error is written to the debug log.

**B-** The variable, myAccount, is automatically cast to the List data type.

- C- The first Account returned Is assigned to myAccour.t.
- D- An unhandled exception is thrown and the code terminates.

**Answer:**

---

D

## Question 5

---

**Question Type: MultipleChoice**

---

A developer is designing a new application on the Salesforce platform and wants to ensure it can support multiple tenants effectively.

Which design framework should the developer consider to ensure scalability and maintainability?
