## Question 1

---

**Question Type:** MultipleChoice

---

A developer creates an application event that has triggered an infinite loop.

What may have caused this problem?

### Options:

---

- A- The event is fired from a custom renderer.
- B- The event has multiple handlers registered in the project.
- C- The event handler calls a trigger.
- D- An event is fired 'ontouchend" and is unhandled.

### Answer:

---

A

## Question 2

---

**Question Type:** MultipleChoice

---

What should be added to the setup, in the location indicated, for the unit test above to create the controller extension for the test?

A)

```
ApexPages.StandardController sc = new  
ApexPages.StandardController(acct);  
AccountControllerExt extension = new  
AccountControllerExt(sc);
```

B)

```
AccountControllerExt extension = new  
AccountControllerExt(acct.Id);
```

C)

```
AccountControllerExt extension = new  
AccountControllerExt(acct);
```

**Options:**

---

A- Option A

B- Option B

C- Option C

**Answer:**

---

A

## Question 3

---

**Question Type: MultipleChoice**

---

A developer needs to store variables to control the style and behavior of a Lightning Web Component.

Which feature can be used to ensure that the variables are testable in both Production and all Sandboxes?

**Options:**

---

A- Custom setting

- B- Custom object
- C- Custom variable
- D- Custom metadata

**Answer:**

---

D

## Question 4

---

**Question Type:** MultipleChoice

---

Consider the Apex class below that defines a RemoteAction used on 2 Visualforce search page.

```
global with sharing class MyRemoter {
    public String accountName { get; set; }
    public static Account account { get; set; }
    public MyRemoter() {}

    @RemoteAction
    global static Account getAccount(String accountName) {
        account = [SELECT Id, Name, NumberOfEmployees
                    FROM Account WHERE Name = :accountName];
        return account;
    }
}
```

Which code snippet will assert that the remote action returned the correct Account?

A)

```
Account a = controller.getAccount('TestAccount');  
System.assertEquals('TestAccount', a.Name);
```

B)

```
MyRemoter remote = new MyRemoter('TestAccount');  
Account a = remote.getAccount();  
System.assertEquals('TestAccount', a.Name);
```

C)

```
Account a = MyRemoter.getAccount('TestAccount');  
System.assertEquals('TestAccount', a.Name);  
  
MyRemoter remote = new MyRemoter();  
Account a = remote.getAccount('TestAccount');  
System.assertEquals('TestAccount', a.Name);
```

**Options:**

---

A- Option A

B- Option B

C- Option C

D- Option D

**Answer:**

---

C

## Question 5

---

**Question Type: MultipleChoice**

---

A developer is tasked with ensuring that email addresses entered into the system for Contacts and for a custom object called survey Response c do not belong to a list of blocked domains.

The list of blocked domains is stored in a custom object for ease of maintenance by users. The survey Response c object is populated via a custom Visualforce page.

What is the optimal way to implement this?

**Options:**

---

- A-** Implement the logic in validation rules on the Contact and the Survey Response\_c Objects.
- B-** Implement the logic in a helper class that is called by an Apex trigger on Contact and from the custom Visualforce page controller.
- C-** Implement the logic in an Apex trigger on Contact and also implement the logic within the custom Visualforce page controller.
- D-** Implement the logic in the custom Visualforce page controller and call that method from an Apex trigger on Contact.

**Answer:**

---

B

## Question 6

---

**Question Type: MultipleChoice**

---

Which statement is true regarding savepoints?

**Options:**

---

- A- You can roll back to any savepoint variable created in any order.
- B- Static variables are not reverted during a rollback.
- C- Reference to savepoints can cross trigger invocations.
- D- Savepoints are not limited by DML statement governor limits.

**Answer:**

---

B
