Question 1

In which one of these areas do you store user credentials for accounts that are involved with communication

between your company and a communications partner?

Options:

A- In the communication scenario

B- In the communication arrangement

C- In output channel definition

D- In the communication system

Answer:

B

Explanation:

According to SAP.com, 'The Communication Arrangement is used to store the user credentials for the accounts that are involved in the communication between the company and the communication partner.' This is done by defining the user name and password for the communication partner in the Communication Arrangement. The other options are not used to store user credentials.

Question 2

You have set up a project intercompany scenario with a customer project in buying company "B", and service performers from the selling company "S".

A project team member from "S" creates an expense report with an account assignment to the customer project.

In company "B", which of the following documents contain information about the recorded expenses?

Note: There are 2 correct answers to this question.

Options:

A- Purchase order

B- Expense report

C- Supplier invoice

D- Goods and services receipt

Answer:

C, D

Question 3

Question Type: **MultipleChoice**

Which of the following entities are supported by projects in SAP Business ByDesign? Note: There are 3 correct answers to this question.

Options:

A- Task

B- Milestone

C- Checklist

D- Equipment

E- Sub-projects

Answer:

A, B, E

Explanation:

A task in a project is a work package that can be planned, assigned, executed, and reported. Tasks are a fundamental element of project management and are used to break down complex projects into smaller, manageable pieces.

A milestone in a project is a significant event or achievement that marks the completion of a major deliverable. Milestones serve as a way to measure progress and provide visibility into the status of a project.

Sub-projects are a way to organize and structure complex projects. A sub-project is a project within a project and can be used to manage separate parts of a larger project. Sub-projects can be used to manage different phases of a project, different locations, or different departments.

Question 4

Question Type: **MultipleChoice**

Which account assignments are possible when using the general ledger?

Note: There are 3 correct answers to this question.

Options:

A- Business partners

B- G/L Account

C- Functional Area

D- Profit Center

E- Fixed assets

Answer:

B, C, D

Explanation:

According to the SAP Business ByDesign Help Center, when using the general ledger, the following account assignments are possible:

1. G/L Account: The general ledger account is used to record financial transactions and is assigned to each journal entry. The general ledger provides a summary of the financial status of a company, including its assets, liabilities, and equity.

2. Functional Area: The functional area is a subdivision of a company that is responsible for a specific business function, such as sales, production, or research and development. The functional area is used to analyze the profitability and cost structures of a company and to allocate costs to the correct departments.

3. Profit Center: The profit center is a management-oriented unit within a company that is used to measure and analyze the profitability of specific business activities. The profit center can be used to distribute costs and revenues to specific business activities and to provide a more detailed view of the financial performance of a company.

Question 5

Question Type: **MultipleChoice**

Which of the following processes lets you monitor the in-transit stock in the "Stock Overview Common Task"? (Choose 3)

Options:

A- Customer returns

B- Third-Party order fulfillment

C- Intracompany stock transfer

D- Intercompany stock transfer

Question 6

Question Type: **MultipleChoice**

Two companies "A" and "B" are setup in organizational management.

Which of the following options can you use as the account for the sales order in company "A", when selling goods to company "B"?

Options:

A- The site receiving the goods corresponding to company 'B'.

B- The partner company corresponding to company 'B'.

C- The business partner corresponding to company 'B'.

D- The organizational unit representing company 'B'.

Answer:

B

Explanation:

The correct answer is B. The partner company corresponding to company 'B'. When selling goods to company 'B', you can use the partner company corresponding to company 'B' as the account in company 'A'. This is because the partner company is the parent company with the highest level in the organizational structure and is responsible for the overall business activities of the company. According to the SAP.com study resources (https://help.sap.com/viewer/25e0947a6a7d4ed2a5a9f90a5ae547f3/1905/en-US/3c3f3a3efd9e48f9ae0f14b837f73cac.html),the partner company is the account that is used in the sales order when selling goods to another company.

Question 7

Question Type: **MultipleChoice**

Which of the following pricelists are delivered by SAP?

Note: There are 3 correct answers to this question.

Options:

A- Customer-specific pricelist

B- Base pricelist

C- Delivery-specific pricelist

D- Quotation-specific pricelist

E- Company-specific pricelist

Answer:

A, B, E

Question 8

Question Type: MultipleChoice

With which priority is the functional area automatically determined?

Options:

A- First: General ledger account

Second: Cost center type

B- First: Cost center type

Second: Profit center

C- First: Profit center

Second: General ledger account

D- First: Cost center type

Second: General ledger account

Answer:

A

Question 9

Question Type: MultipleChoice

Which of the following can you use to connect external systems and applications to SAP Business ByDesign?

Note: There are 3 correct answers to this question.

Options:

A- Custom OData services

B- IDoc interfaces using RFC

C- Web service APIs (SOAP)

D- DCOM interfaces

E- OData APIs for reports and data sources

Answer:

A, C, E

Explanation:

According to the SAP Business ByDesign Help Center, the following technologies can be used to connect external systems and applications to SAP Business ByDesign:

1. Custom OData services: SAP Business ByDesign provides a flexible platform for creating custom OData services that allow you to expose your own data and business logic to external systems and applications. You can use custom OData services to integrate SAP Business ByDesign with other applications and services, such as mobile devices, cloud services, and web-based portals.

2. Web service APIs (SOAP): SAP Business ByDesign provides a comprehensive set of web service APIs that use the Simple Object Access Protocol (SOAP) to exchange data between SAP Business ByDesign and external systems. You can use these APIs to integrate SAP Business ByDesign with other applications, such as CRM systems, ERP systems, and custom-built applications.

3. OData APIs for reports and data sources: SAP Business ByDesign provides OData APIs for accessing reports and data sources in the system. You can use these APIs to extract data from SAP Business ByDesign and integrate it with other applications and systems, such as data analytics tools, business intelligence systems, and data warehousing solutions.
