## Question 1

---

**Question Type:** MultipleChoice

---

Why would you implement SQL in calculation views? Note: There are 2 correct answers to this question.

### Options:

---

- A- To increase the possibilities for consumption
- B- To fine-tune performance
- C- To implement custom functions
- D- To define dynamic analytic privileges

### Answer:

---

B, D

## Question 2

---

**Question Type:** MultipleChoice

---

In your calculation view, you want to consume a custom data source defined using SQLScript. In which type of object do you write your code?

**Options:**

---

- A- Procedure
- B- Scalar function
- C- Anonymous block
- D- Table function

**Answer:**

---

D

## Question 3

---

**Question Type:** MultipleChoice

---

In a calculation view, your table function node executes a table function that requires input parameters.

How can you fill the input parameters of the table function? Note: There are 3 correct answers to this question.

**Options:**

---

- A- Define constant values.
- B- Reference the output of a procedure.
- C- Assign a hierarchy node.
- D- Map columns from lower nodes.
- E- Create and map an input parameter.

**Answer:**

---

A, D, E

## Question 4

---

**Question Type:** MultipleChoice

---

Why would you use an anonymous block when writing SQLScript?

**Options:**

---

- A- To check the results without applying user privileges.
- B- To test your code without generating a logic container.
- C- To hide the actual tables by using aliases in the code.
- D- To execute a statement without creating entries in the database log.

**Answer:**

---

B

## Question 5

---

**Question Type:** MultipleChoice

---

In a calculation view, why would you implement an SQL expression? Note: There are 3 correct answers to this question.

**Options:**

---

- A- To generate a restricted column
- B- To define a filter
- C- To generate a calculated column

**D-** To generate hierarchies

**E-** To convert currencies

**Answer:**

---

A, B, C

## Question 6

---

**Question Type: MultipleChoice**

---

You create a table function to remove historic records, sum the current total weekly working hours for each employee, and update the personnel table with the results. The deployment of the table function fails.

Which of the following could be a valid reason?

**Options:**

---

**A-** You did not define at least one input parameter.

**B-** You did not define a valid table type.

**C-** Your table function includes a DELETE statement.

**D-** Your table function refers to a scalar function.

**Answer:**

---

C
