Question 1

A customer is deploying a small Horizon View environment. It wants to minimize the number of connection servers required for the architecture while minimizing single points of failure and simplifying the user experience.

Which remote access method would accomplish this?

Options:

A- Security Servers

B- NSX load balancing

C- VPN Tunnel

D- Unified Access Gateway

Answer:

D

Question 2

A company has developed a new in-house web application supporting SAML Federation. The CIO has asked that all sales users access the application using the single sign-on option. Users will access this application from several different locations globally. The company has two datacenters based in the US and UK.

Which VMware technology can an architect recommend to meet the requirements?

Options:

A- VMware User Environment Manager

B- VMware App Volumes

C- VMware Identity Manager

D- VMware Horizon View

Answer:

C

Question 3

Question Type: **MultipleChoice**

When determining the number, type, and size of Horizon View components to be installed, which three pieces of information must an architect know? (Choose three.)

Options:

A- Number of concurrent users who will connect to the environment.

B- Type of client that will be used by the users.

C- Version of Windows that will be used for the virtual desktops

D- Type of desktop pools that will be provisioned.

E- Maintenance windows and availability requirements for the environment.

Answer:

A, C, D

Question 4

Question Type: **MultipleChoice**

The finance group in a company has asked for a new application to be made available to all of the members of the finance department. The application is currently installed on all the finance desktops, but will be moving to a cloud-hosted model.

What solution should the IT administrator use to manage access to the new application?

Options:

A- Package the application using ThinApp and deploy to the finance department.

B- Manage the application with VMware Identity Manager.

C- Assign the new application to the finance department using App Volumes.

D- Deploy each user a new cloud based virtual desktop.

Answer:

A

Question 5

Question Type: MultipleChoice

An architect is designing Active Directory (AD) permissions for a Horizon environment that will use pre-existing computer accounts. The AD Security Team has restrictions about the use of service accounts.

What two sets of minimum permission are needed to delegate to an AD service account? (Choose two.)

Options:

A- Create Computer Objects, Delete Computer Objects

B- List Contents, Read All Properties

C- Read Permissions, Reset Password

D- Write Permissions, Change Password
References:

Answer:

A, C

Question 6

Question Type: **MultipleChoice**

A company wants to deploy Horizon desktops with persistent disks for their power users and instant clone desktops for their task workers.

What is the minimum configuration needed?

Options:

A- Two VMs with two snapshots of each VM.

B- One template with two snapshots.

C- One VM with one snapshot.

D- Two VMs with one snapshot of each VM.

Answer:

A

Question 7

Question Type: **MultipleChoice**

A customer with Horizon has decided to implement Workspace One for mobile management and Single-Sign On access to Horizon entitlements. The customer plans to use cloud services when possible. A decision is made to use cloud-hosted Workspace One.

Which component must be deployed on-premises to support the scenario?

Options:

A- Identity Manager

B- AirWatch Cloud Connector

C- User Environment Manager

D- Identity Manager Connector

Answer:

B

Question 8

The architect of a company is asked to design a single VMware View Pod/Block without a single point of failure component.

Which component offers the lowest availability?

Options:

A- Horizon View Connection Server

B- Horizon View Composer

C- vCenter Server

D- Horizon View Security Server

Answer:

C

Question 9

A company had a security breach which resulted in stolen dat

a. The CIO has mandated that the security team implement a data leak prevention mechanism and better control over how data is accessed and distributed.

Which technology will prevent users from copying data from their Horizon View virtual desktop to their local endpoint when they are connected outside the corporate LAN?

Options:

A- Identity Manager

B- User Environment Manager

C- App Volumes

D- Unified Access Gateway

Answer:

D

Question 10

Question Type: MultipleChoice

A customer reported that during maintenance activity, some users were unable to connect to assigned desktops and received an error that the pool had no desktops available. Other users were able to connect to their assigned desktops without issue.

Which three reasons could be the cause of the failure? (Choose three.)

Options:

A- SQL Server was down.

B- VMware Composer Server was down.

C- View Connection Server was down.

D- vCenter Server was down.

E- App Volumes Manager Server was down.

Answer:

C, D, E

Question 11

Question Type: **MultipleChoice**

A company is deploying VDI and needs to meet these requirements:

* Support a bring-your-own-device (BYOD) strategy

* Support external contractors

* Support access from anywhere

* Reduce or eliminate costly desktop and laptop replacement

Which two solutions should an architect recommend? (Choose two.)

Options:

A- Deploy Airwatch.

B- Leverage Horizon 7 clients.

C- Deploy Horizon 7 Access Point appliances.

D- Deploy AppVolumes.

E- Provide Thin Clients to end-users.

Answer:

A, C
