Question 1

Question Type: MultipleChoice

What are some best practices for writing SQLScript for use with calculation views? Note: There are 2 correct answers to this question.

Options:

- A- Control the flow logic using IF-THEN-ELSE conditions.
- B- Break up large statements by using variables.
- C- Choose declarative language instead of imperative language.
- D- Use dynamic SQL.

Answer:

B, C

Question 2

Question Type: MultipleChoice

You want to map an input parameter of calculation view A to an input parameter of calculation view B using the parameter mapping feature in the calculation view editor.

However, the input parameters of calculation view B are not proposed as source parameters. What might be the reason for this?

Options:

- A- You already mapped the input parameters in another calculation view.
- B- The names of the input parameters do not match.
- C- You selected the wrong parameter mapping TYPE.

D- Your source calculation view is of type DIMENSION.

Answer:

A

Question 3

Question Type: MultipleChoice

A calculation view includes a rank node that uses the source data and settings shown in the graphic.

Data Source for Rank Node:

COUNTRY	DIVISION	COMPANY	AMOUNT
US	X	A	10
US	X	B	12
US	X	C	13
US	P	D	16
US	P	E	14
US	P	F	18
DE	X	B	5
DE	X	C	19
DE	X	D	13
CA	X	A	20
CA	X	B	21
CA	X	D	4
CA	P	E	2

Rank Node Settings:

Aggregation Function: **Row**
Result Set Direction: **Top**
Result Set Type: **Absolute**
Target Value: **Fixed (2)**
Offset: **Fixed (0)**

Partition Columns: **COUNTRY
DIVISION**

Your query requests all columns of the rank node. How many rows are in the output of your query?

Options:

A- 9

B- 2

C- 5

D- 6

Answer:

A

Question 4

Question Type: MultipleChoice

Which solutions form the SAP Business Technology Platform? Note: There are 2 correct answers to this question.

Options:

- A- Analytics
- B- Intelligent Suite
- C- Experience Management
- D- Application Development & Integration

Answer:

A, D

Question 5

Question Type: MultipleChoice

A calculation view consumes the data sources shown in the graphic.

Sales Projection January

Company	Product	Quantity
001	X	10
002	Y	7
003	X	10
005	Y	8

Sales Projection February

Company	Product	Quantity
001	X	10
002	Y	7
004	X	10
006	Y	8

You want to identify which companies sold products in January AND February. What is the optimal way to do this?

Options:

- A- Use a union node.
- B- Use an intersect node.
- C- Use an aggregation node.
- D- Use a minus node

Answer:

B

Question 6

Question Type: MultipleChoice

Using the table in the diagram, you need to create a CUBE calculation view.

Table A		Output A		
Country	Value	France	Germany	UK
France	100	300	500	200
France	200			
Germany	100			
Germany	100			
Germany	200			
Germany	100			
UK	200			

What is the simplest approach to create the output shown in the screenshot?

Options:

- A-** Implement a union node and map each country as a separate column.
- B-** Create a restricted column for each country.
- C-** Create a filter expression that uses an OR operator.
- D-** Create 3 calculated columns.

Answer:

A

Question 7

Question Type: MultipleChoice

Which of the following techniques can you use to improve the performance of calculation views? Note: There are 2 correct answers to this question.

Options:

- A- Avoid aggregating data early in the data flow.
- B- Partition large tables.
- C- Limit the number of stacked calculation views.
- D- Implement union pruning.

Answer:

B, C

Question 8

Question Type: MultipleChoice

What are some of the typical tasks performed by the SAP HANA Cloud modeler role? Note: There are 2 correct answers to this question.

Options:

- A- Create graph workspaces

- B-** Configure data tiering
- C-** Develop calculation views
- D-** Develop SAP Fiori apps

Answer:

A, C

Question 9

Question Type: MultipleChoice

You created a table and inserted data in it using SQL statements inside the SAP HANA Deployment Infrastructure (HDI) container of your project. You add this table as a data source to a calculation view and try to deploy it. What do you observe in the SAP HANA database container?

Options:

- A-** The deployment is successful but the data preview returns an error message.
- B-** The deployment fails and the table is not dropped.

C- The deployment fails and the table is dropped.

D- The deployment is successful and the data preview returns expected data.

Answer:

B
