Question 1

Consider the following statement.

According to the TOGAF standard, a governed approach of a particular deliverable will ensure adherence to the principles, standards, and requirements of the existing or developing architectures.

Which deliverable does this refer to?

Options:

A- The Architecture Vision

B- The Statement of Architecture Work

C- An Architecture Contract

D- The Architecture Definition Document

Answer:

C

Explanation:

According to the TOGAF Standard, 10th Edition, an architecture contract is "a formal agreement between a service provider and a service consumer that defines the mutual commitments and expectations for the delivery of an architecture" 1. An architecture contract is a governed approach of a particular deliverable that will ensure adherence to the principles, standards, and requirements of the existing or developing architectures, as it specifies the roles, responsibilities, deliverables, quality criteria, and acceptance criteria for the architecture work 1. The other options are not correct, as they are not governed approaches of a particular deliverable, but rather different types of deliverables within the architecture development process. An architecture vision is "a high-level, aspirational view of the target architecture" 1. A statement of architecture work is "a document that defines the scope and approach that will be used to complete an architecture project" 1. An architecture definition document is "a document that describes the baseline and target architectures for one or more domains" 1. Reference: 1: TOGAF Standard, 10th Edition, Part I: Introduction, Chapter 3: Definitions.

Question 2

Question Type: MultipleChoice

Consider the following statements:

1. Groups of countries, governments, or governmental organizations (such as militaries) working together to create common or shareable deliverables or infrastructures

2. Partnerships and alliances of businesses working together, such as a consortium or supply chain

What are those examples of according to the TOGAF Standard?

Options:

A- Enterprises

B- Organizations

C- Business Units

D- Architectures Scopes

Answer:

D

Explanation:

According to the TOGAF standard, the two statements provided refer to different scopes within which architecture can be developed:

Groups of countries, governments, or governmental organizations working together typically align with broader, often international, scopes of architecture that transcend individual enterprise boundaries.
Partnerships and alliances of businesses working together, such as a consortium or supply chain, refer to collaborative efforts that can define architecture at a scope involving multiple enterprises.

In both cases, the term 'Architectures Scopes' is appropriate because it reflects the varying levels and contexts in which architectures can be defined, ranging from single business units to collaborative inter-organizational efforts.

Question 3

Exhibit:

A

Architecture Metamodel

Artifacts in the landscape are structured according to the metamodel

Solutions Landscape

Enables the enterprise

Architecture Landscape

Best practice creates reference architecture

Reference Library

Adopted by the enterprise

Reference models adopted by the enterprise

External Reference Models

Standards have reference implementations

The Reference Library is governed

Business outcomes delivered

Standards are complied with

Standards Library

Standards adopted by the enterprise

External Standards

Best practice creates standards

Architecture Requirements Repository

Drivers for the enterprise

The landscape is governed

Compliance is governed

B

Visibility and escalation

Architecture Board steers and manages the capability

Architecture Board

C

Consider the illustration. What are the items labelled A, B, and C?

Options:

A- A-Enterprise Repository, B-Governance Repository, C-Board Repository

B- A-Architecture Repository, B-Governance Repository, C-Architecture Capability

C- A-Architecture Repository, B-Governing Board, C-Enterprise Capability

D- A-Enterprise Repository, B-Board repository, C-Enterprise Capability

Answer:

C

Explanation:

A-Architecture Repository: This is a part of the Architecture Metamodel that contains artifacts structured according to the metamodel. It includes the Architecture Landscape which is adopted by the enterprise and governed by certain standards and practices.

B-Governing Board: The Governing Board ensures visibility and escalation, meaning it oversees and manages the capability of the architecture landscape. It plays a crucial role in governance.

C-Enterprise Capability: This refers to how well an enterprise can execute its mission, meet business objectives or satisfy its stakeholders' needs and expectations. It's influenced by both internal factors (like resources, processes) and external ones (like market trends).

Question 4

Which of the following best describes the purpose of the Architecture Requirements Specification?

Options:

A- It contains an assessment of the current architecture requirements

B- It provides a set of statements that outline what a project must do to comply with the architecture

C- It is sent from the sponsor and triggers the start of an architecture development cycle

D- It defines the scope and approach to complete an architecture project

Answer:

B

Explanation:

The Architecture Requirements Specification is one of the TOGAF deliverables that provides a set of quantitative statements that outline what an implementation project must do in order to comply with the architecture12. It is a companion to the Architecture Definition Document, which provides a qualitative view of the solution and aims to communicate the intent of the architect. The Architecture Requirements Specification provides a quantitative view of the solution, stating measurable criteria that must be met during the implementation of the architecture3. It typically forms a major component of an implementation contract or contract for more detailed

Architecture Definition4. Reference:

* Deliverable: Architecture Requirements Specification - The Open Group

* The TOGAF Standard, Version 9.2 - Architecture Requirements Specification - The Open Group

Question 5

Refer to the table below:

Phase	Output & Outcome	Essential Knowledge
?	Completion of the projects to implement the changes necessary to reach the adjusted target state.	Purpose and constraints on the implementation team. (Gap, Architecture Requirement Specification, Control) How stakeholder priority and preference adjust in response to success, value, effort, and risk of change. (Stakeholder Requirements)

Which ADM Phase does this describe?

Options:

A- Phase E

B- Phase G

C- Phase A

D- Phase F

Answer:

B

Explanation:

The table describes the output, outcome, and essential knowledge of an ADM phase that oversees the implementation of changes necessary to reach the adjusted target state. This corresponds to Phase G, also known as Implementation Governance, which ensures that the architecture defined in earlier phases is realized, and it oversees the development and implementation of projects to align with this architecture. The essential knowledge required during this phase includes understanding constraints on the implementation team and adjusting stakeholder priority and preference in response to success, value, effort, and risk of change. Reference: TOGAF Version 9.1 - 1

Question 6

Question Type: **MultipleChoice**

What does the TOGAF ADM recommend for use in developing an Architecture Vision document?

Options:

A- Requirements Management

B- Architecture Principles

C- Gap Analysis

D- Business Scenarios

Answer:

D

Explanation:

Business scenarios are a technique recommended by the TOGAF ADM for use in developing an Architecture Vision document12. Business scenarios are a means of capturing the business requirements and drivers, the processes and actors involved, and the desired outcomes and measures of success34. Business scenarios help to create a common vision and understanding among the stakeholders, and to identify and validate the architecture requirements . Business scenarios also provide a basis for analyzing the impact and value of the proposed architecture. Reference:
